## FCC Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device,  pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

### FCC Caution:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter. To assure continued compliance, for example, use only shielded interface cables when connecting to computer or peripheral devices.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference
- (2) This device must accept any interference received, including interference that may cause undesired operation.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

### **FCC Radiation Exposure Statement**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of **21cm** between the radiator and your body.

### **CE Compliance Statement**

This device meets the RED directive 2014/53/EU of EU requirements on the limitation of exposure of the general public to electromagnetic fields by way of health protection. The device complies with RF specifications in that the distance between the device and your body should not be less than 20 cm.

### **Safety**

This equipment is designed with the utmost care for the safety of those who install and use it. However, special attention must be paid to the dangers of electric shock and static electricity when working with electrical equipment. All guidelines must be followed at all times to ensure the safe use of the equipment.

### **WEEE regulation**

To avoid the potential effects on the environment and human health as a result of the presence of hazardous substances in electrical and electronic equipment, end users of electrical and electronic equipment should understand the meaning of the crossed-out wheeled bin symbol. Do not dispose of WEEE as unsorted municipal waste; WEEE should be collected separately.

### **Revision**

User Manual of PLANET 2.4GHz 300Mbps 802.11n Outdoor Wireless AP/CPE

Model: WAP-200N/WBS-200N

Rev: 1.0 (August, 2017)

Part No. EM-WAP-200N\_WBS-200N\_v1.0

# Chapter 1. Product Introduction

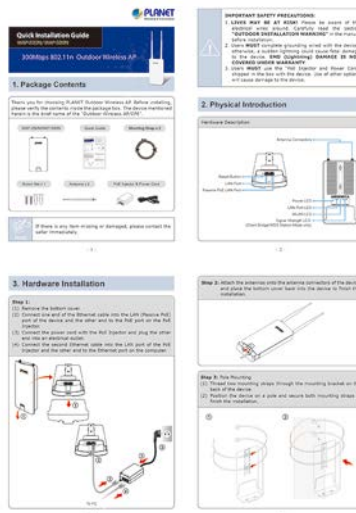

## 1.1 Package Contents

Thank you for choosing PLANET WAP-200N/WBS-200N series. Before installing the AP/CPE, please verify the contents inside the package box.

**WBS-200N / WAP-200N**

**Quick Installation Guide**

**Mounting Strap x 2**

**Screw Set x 1**

**PoE Injector & Power Cord**

**Antenna x 2 (WAP-200N only)**

If there is any item missing or damaged, please contact the seller immediately.

## 1.2 Product Description

### Cost-effective Wireless Solution with Superior Performance

PLANET WAP-200N/WBS-200N 300Mbps 802.11n Outdoor Wireless AP/CPE offers a better range and excellent throughput. Via the WAP-200N's RP-SMA antenna connectors and the WBS-200N's embedded 8dBi dual-polarity directional antenna, it is easy to build different point to multi-point applications with good diversity coverage and better noise immunity effect, thus heightening the performance and stability of a long-distance connectivity.

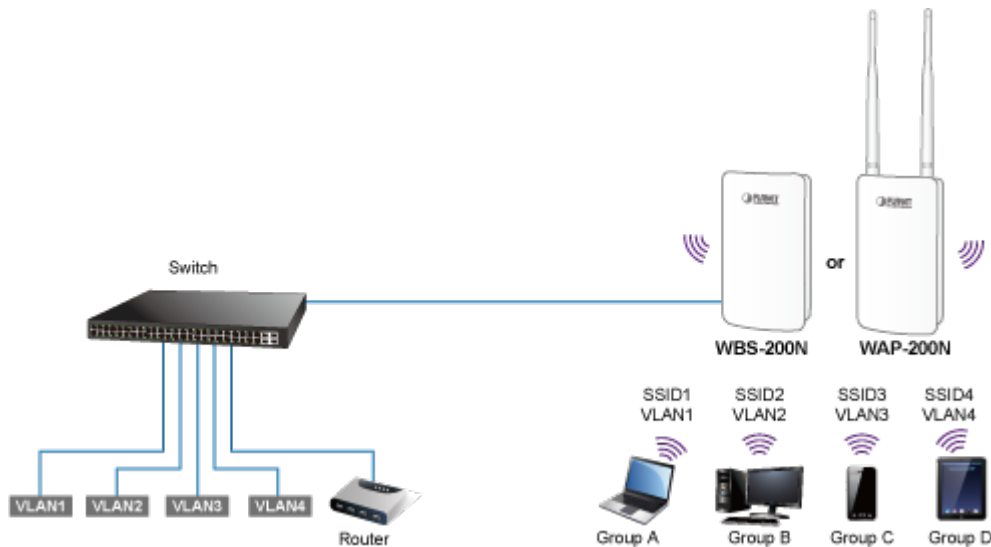

### Designed for Various Requirements

The WAP-200N/WBS-200N is dedicatedly designed for WISP solution that provides CPE users with Internet access via the WISP provider in rural areas. Besides, it caters to various wireless communication connectivities (AP, Client, WDS, Repeater and WISP), thus meeting users' application requirements.

### Multiple SSIDs with VLAN Tagging

Multiple SSIDs can broadcast up to four wireless networks with different names. For management purposes, the **IEEE 802.1Q VLAN** supported allows multiple VLAN tags to be mapped to multiple SSIDs to distinguish the wireless access. This makes it possible for the WAP-200N/WBS-200N to work with managed Ethernet switches to have VLANs assigned for a different access level and authority.

### Flexible and Reliable Outdoor Characteristics

The WAP-200N/WBS-200N is definitely suitable for wireless IP surveillance to enable to have wide deployments between buildings and to act as the backbone of public service. Additionally, its self-healing capability keeps connection alive all the time. With the **IP55-rated** outdoor UV-resistant enclosure, the WAP-200N/WBS-200N can perform normally under rigorous weather conditions, meaning it can be installed in any harsh, outdoor environments. With the **proprietary Power over Ethernet (PoE)** design, the WAP-200N/WBS-200N can be easily installed in the areas where power outlets are not available.

### Advanced Security and Rigorous Authentication

The WAP-200N/WBS-200N supports 152-bit WEP, WPA/WPA2, WPA-PSK and WPA2-PSK wireless encryptions, the advanced WPA2-AES mechanism and 802.1X RADIUS authentication, which can effectively prevent eavesdropping by unauthorized users or bandwidth occupied by unauthenticated wireless access. Furthermore, any users are granted or denied access to the wireless LAN network based on the ACL (Access Control List) that the administrator pre-established.

### Easy Deployment and Management

With user-friendly Web UI and comprehensive management features including client limit control and **wireless traffic shaping**, the WAP-200N/WBS-200N is easy to limit the client access and inbound/outbound bandwidth control, even for users who have no experience in setting up a wireless network. Furthermore, with the **Planet Smart Discovery** Utility, **SNMP** and diagnostics tools, the WAP-200N/WBS-200N is convenient to be managed remotely.

## 1.3 Product Features

- **Industrial Compliant Wireless LAN**
  - Compliant with the IEEE 802.11b/g/n wireless technology
  - 2T2R architecture with data rate of up to 300Mbps
  - Equipped with two 10/100Mbps RJ45 ports, with auto MDI/MDI-X supported
- **Fixed Network Broadband Router**
  - Supported WAN connection types in WISP mode: DHCP, Static IP, PPPoE, PPTP
  - Supports Port Forwarding and DMZ for various networking applications
  - Supports DHCP server in WISP mode
- **RF Interface Characteristics**
  - Built-in 5dBi detachable antennas with RP-SMA connectors (WAP-200N)
  - Built-in 8dBi dual-polarization antenna (WBS-200N)
  - High output power with multiply-adjustable transmit power control
- **Outdoor Environmental Characteristics**
  - IP55 rating
  - Passive Power over Ethernet design
  - Operating temperature: -20~70°C
- **Multiple Operation Modes and Wireless Features**
  - Multiple operation modes: AP, Client Bridge, Client Router (WISP), WDS, Repeater
  - WMM (Wi-Fi multimedia) provides higher priority to multimedia transmitting over wireless
  - Wireless Traffic Shaping to control the upload/download bandwidth
  - Wi-Fi scheduler allows to be enabled or disabled based on predefined schedule
- **Secure Network Connection**
  - Full encryption supported: 64-/128-/152-bit WEP, WPA/WPA2, WPA-PSK/WPA2-PSK and 802.1X RADIUS authentication
  - Supports 802.1Q VLAN pass-through over WDS and SSID-to-VLAN mapping
  - Supports up to 50 entries of MAC address filtering
- **Easy Installation and Management**
  - IPv4/IPv6 dual-stack management networks
  - Multilingual Web User Interface: English, Spanish, French, German, Portuguese, Russian, and Simplified Chinese
  - CLI command and SNMP-based management interface
  - Self-healing mechanism through system auto reboot setting
  - System status monitoring through remote Syslog Server and Device Discovery
  - Diagnostic tools include Ping, Traceroute, Speed
  - Planet Smart Discovery Utility allows administrator to discover and locate each AP

## 1.4 Product Specifications

Product	WAP-200N	WBS-200N
		2.4GHz 300Mbps 802.11n Outdoor Wireless AP/CPE
<b>Hardware Features</b>		
Standard Support	IEEE802.11b/g/n IEEE 802.3 IEEE 802.3u IEEE 802.3x	
Memory	64 Mbytes DDR SDRAM 16 Mbytes Flash	
PoE	Passive PoE	
Interface	Wireless IEEE 802.11b/g/n, 2T2R PoE LAN (LAN 1): 1 x 10/100BASE-TX, auto-MDI/MDIX, 24V passive PoE In LAN 2: 1 x 10/100BASE-TX, auto-MDI/MDIX	
Button	Reset button	
LED	PWR, LAN, WLAN, Signal Strength	
Dimensions (W x D x H)	100 x 29 x 186mm (without antennas) 100 x 29 x 380mm (with antennas)	100 x 29 x 186mm
Weight	300g (without antennas) 332g (with antennas)	300g
Power Consumption	Maximum 7.2W	
Power Requirements	LAN1 <ul style="list-style-type: none"> <li>■ 24V DC, 0.6A (Passive PoE)</li> <li>■ Pin 4, 5 V DC+</li> <li>■ Pin 7, 8 V DC-</li> </ul>	
Mounting Type	Mast, wall mount	
<b>Wireless Interface Specifications</b>

Data Rate	IEEE 802.11b: 1, 2, 5.5, 11Mbps IEEE 802.11g: up to 54Mbps IEEE 802.11n (20MHz): up to 150Mbps IEEE 802.11n (40MHz): up to 300Mbps	

<b>Media Access Control</b>	CSMA/CA
<b>Modulation</b>	Transmission/Emission type: OFDM Data Modulation type: OFDM with BPSK, QPSK, 16-QAM, 64-QAM
<b>Frequency Band</b>	2.412GHz ~ 2.472GHz
<b>Operating Channel</b>	United States -- FCC: 2.414~2.462GHz (11 channels) Europe -- ETSI: 2.412~2.472GHz (13 channels)
<b>RF Output Power (dBm)</b>	FCC: IEEE 802.11b/g/n: up to 26 ± 2dBm ETSI: IEEE 802.11b/g/n: < 20dBm (EIRP)
<b>Receiver Sensitivity (dBm)</b>	<p><b>IEEE 802.11b:</b> -95/ -93dBm (1~2/ 5.5~11Mbps)</p> <p><b>IEEE 802.11g:</b> -95/ -93/ -92/ -80/ -77/ -75dBm (6/ 9~18/ 24/ 36/ 48/ 54Mbps)</p> <p><b>IEEE 802.11n:</b> MCS0/ MCS8: -95dBm MCS1/ MCS9: -93dBm MCS2/ MCS10: -92dBm MCS3/ MCS11: -90dBm MCS4/ MCS12: -86dBm MCS5/ MCS13: -83dBm MCS6/ MCS14: -76dBm MCS7/ MCS15: -73dBm</p>
<b>Environment &amp; Certification</b>	
<b>Operating Temperature</b>	-20~70 degrees C
<b>Operating Humidity</b>	10~90% (non-condensing)
<b>IP Level</b>	IP55
<b>Regulatory</b>	CE, FCC, RoHS
<b>Software Features</b>	
<b>LAN</b>	<ul style="list-style-type: none"> <li>■ Static IP</li> <li>■ Dynamic IP</li> <li>■ DHCP server in WISP mode</li> </ul>
	Supports 802.1d STP (Spanning Tree)
<b>WAN Connection Type (WISP Mode only)</b>	<ul style="list-style-type: none"> <li>■ Static IP</li> <li>■ Dynamic IP</li> <li>■ PPPoE</li> <li>■ PPTP</li> </ul>
<b>Wireless Modes</b>	<ul style="list-style-type: none"> <li>■ Access Point</li> <li>■ Client Bridge</li> <li>■ WDS (AP/Bridge/Station)</li> <li>■ Client Router (WISP)/Client AP Router (WISP+AP)</li> <li>■ Repeater</li> </ul>

<b>Firewall</b>	Offers DoS protection to guard user's content network against DoS attacks
	Built-in DMZ and Port Forwarding
	VPN Pass-through: <ul style="list-style-type: none"> <li>■ PPTP Pass-through</li> <li>■ L2TP Pass-through</li> <li>■ IPSec Pass-through</li> </ul>
<b>Channel Width</b>	20MHz/40MHz
<b>Encryption Type</b>	64-/128-/152-bit WEP, WPA, WPA-PSK, WPA2, WPA2-PSK, 802.1X
<b>Wireless Security</b>	Enable/Disable SSID Broadcast
	Wireless MAC address filtering up to 50 entries
	VAP Separation, Station Separation
<b>Max. Wireless Clients</b>	Max. 64 (Suggested 32, depending on usage)
<b>Max. SSIDs</b>	Up to 4
<b>Max. WDS Peers</b>	Up to 4
<b>Wireless QoS</b>	Supports Wi-Fi Multimedia (WMM)
	Supports Wireless Traffic Shaping per Radio
<b>Wireless Advanced Control</b>	Auto Channel Selection
	Auto Transmit Power by Regular Domains
	Client Limit Control
	Distance Control (Auto Ack Timeout)
	Wi-Fi Schedule
<b>Status Monitoring</b>	Connection Status
	Device Discovery, PLANET Smart Discovery
	Wireless Client List/WDS Link List
	DHCP Client Table
	System Log supports remote syslog server
	Signal Strength LEDs in Client Bridge and WDS Station modes
<b>VLAN</b>	VLAN pass-through over WDS
	SSID-to-VLAN mapping
	Management VLAN (VID: 1~4094)
<b>Self-healing</b>	Supports auto reboot settings
<b>NTP</b>	Network Time Management
<b>Management</b>	Web-based UI, CLI (Command Line Interface) supported
	Configuration backup and restore
	SNMP v1/v2c/v3 support, MIB I/II, Private MIB
<b>Diagnostic Tools</b>	Built-in Ping, Trace Route, Speed Test Tools

## Chapter 2. Hardware Installation

### 2.1 Hardware Description

- Dimensions (W x D x H): 100 x 29 x 186mm (without antennas)/100 x 29 x 380mm (with 5dBi antennas)

Figure 2-1 Three-way View (WAP-200N)

Figure 2-2 Three-way View (WBS-200N)

Rear Panel – LED

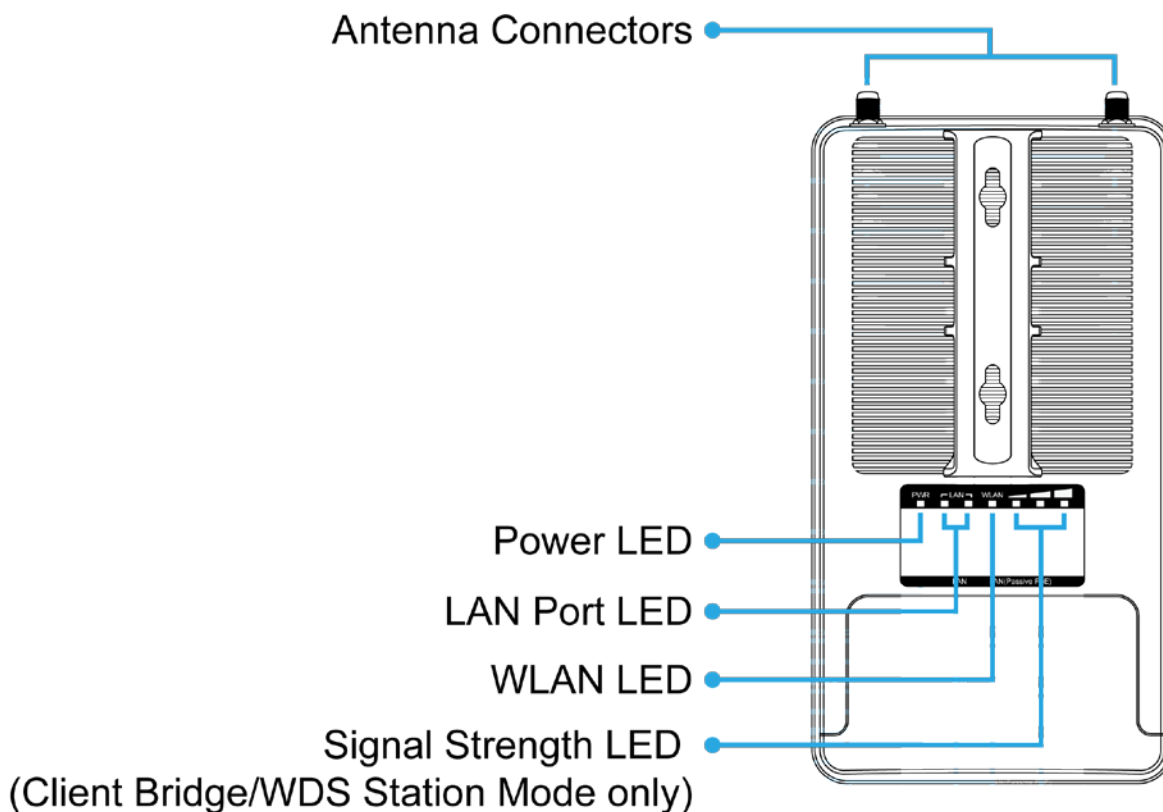

Figure 2-3 Rear Panel (WAP-200N)

Figure 2-4 Rear Panel (WBS-200N)

**LED Definition**

LED	State	Meaning
Power	On	The device is powered on
	Off	The device is powered off
LAN Ports	On	Port linked
	Blinking	Data is transmitting or receiving data
	Off	No link
WLAN	On	The wireless radio is on
	Blinking	Data is transmitting or receiving over wireless
	Off	The wireless radio is off
Signal Strength (Client Bridge/WDS Station/Client Router mode only)	Green LED on	Signal is good
	Orange LED on	Signal is normal
	Red LED on	Signal is poor

Table 2-1 The LED indication

**2.1.1 The Bottom Panel**

The Bottom panel provides the physical connectors connected to the power adapter and any other network device. [Figure 2-5](#) shows the bottom panel of the WAP-200N/WBS-200N.

**Bottom Panel**

Figure 2-5 Bottom Panel (WAP-200N/WBS-200N)

**PoE Warning Label**

Figure 2-6 PoE Warning Label

**Hardware Interface Definition**

Object	Description
Antenna Connectors (WAP-200N only)	2 RP-SMA (Female) antenna connectors
Passive PoE LAN Port	10/100Mbps RJ45 port, auto MDI/MDI-X Passive PoE/PD supported, 24V DC In <b>Pin assignment:</b> <b>Pins 4, 5 (+)</b> <b>Pins 7, 8 (-)</b> <b>NOTE: Please use the 24V DC Passive PoE only (included)</b>
LAN Port	10/100Mbps RJ45 port, auto MDI/MDI-X
Reset Button	Press and hold the <b>Reset</b> button on the device for over 10 seconds to return to the factory default setting.

Table 2-2 Hardware Interface Definition

## Chapter 3. Connecting to the AP

### 3.1 Preparation before Installation

#### 3.1.1 Professional Installation Required

Please seek assistance from a professional installer who is well trained in the RF installation and knowledgeable in the local regulations.

#### 3.1.2 Safety Precautions

1. To keep you safe and install the hardware properly, please read and follow these safety precautions.
2. If you are installing the WBS-200N or WAP-200N for the first time, for your safety as well as others', please seek assistance from a professional installer who has received safety training on the hazards involved.
3. Keep safety as well as performance in mind when selecting your installation site, especially where there are electric power and phone lines.
4. When installing the WBS-200N or WAP-200N, please note the following things:
  - ◆ Do not use a metal ladder;
  - ◆ Do not work on a wet or windy day;
  - ◆ Wear shoes with rubber soles and heels, rubber gloves, long sleeved shirt or jacket.
5. When the system is operational, avoid standing directly in front of it. Strong RF fields are present when the transmitter is on.

### 3.2 Installation Precautions

- Users **MUST** use a proper and well-installed surge arrestor and grounding kit with WBS-200N or WAP-200N; otherwise, a random lightning could easily cause fatal damage to the WBS-200N or WAP-200N. **EMD (Lightning) DAMAGE IS NOT COVERED UNDER WARRANTY.**
- Users **MUST** use the "Power Cord and PoE Injector" shipped in the box with the WBS-200N or WAP-200N. Use of other options will cause damage to the WBS-200N or WAP-200N.

## OUTDOOR INSTALLATION WARNING

### IMPORTANT SAFETY PRECAUTIONS:

**LIVES MAY BE AT RISK!** Carefully observe these instructions and any special instructions that are included with the equipment you are installing.

**CONTACTING POWER LINES CAN BE LETHAL.** Make sure no power lines are anywhere where possible contact can be made. Antennas, masts, towers, guy wires or cables may lean or fall and contact these lines. People may be injured or killed if they are touching or holding any part of equipment when it contacts electric lines. Make sure that equipment or personnel do not come in contact directly or indirectly with power lines.

The horizontal distance from a tower, mast or antenna to the nearest power line should be at least twice the total length of the mast/antenna combination. This will ensure that the mast will not contact power if it falls either during installation or later.

### TO AVOID FALLING, USE SAFE PROCEDURES WHEN WORKING AT HEIGHTS ABOVE GROUND.

- Select equipment locations that will allow safe, simple equipment installation.
- Don't work alone. A friend or co-worker can save your life if an accident happens.
- Use approved non-conducting ladders and other safety equipment. Make sure all equipment is in good repair.
- If a tower or mast begins falling, don't attempt to catch it. Stand back and let it fall.
- If anything such as a wire or mast does come in contact with a power line, **DON'T TOUCH IT OR ATTEMPT TO MOVE IT.** Instead, save your life by calling the power company.
- Don't attempt to erect antennas or towers on windy days.

**MAKE SURE ALL TOWERS AND MASTS ARE SECURELY GROUNDED, AND ELECTRICAL CABLES CONNECTED TO ANTENNAS HAVE LIGHTNING ARRESTORS.** This will help prevent fire damage or human injury in case of lightning, static build-up, or short circuit within equipment connected to the antenna.

- The base of the antenna mast or tower must be connected directly to the building protective ground or to one or more approved grounding rods, using 1 OAWG ground wire and corrosion-resistant connectors.
- Refer to the National Electrical Code for grounding details.

### IF A PERSON COMES IN CONTACT WITH ELECTRICAL POWER, AND CANNOT MOVE:

- **DON'T TOUCH THAT PERSON, OR YOU MAY BE ELECTROCUTED.**
- Use a non-conductive dry board, stick or rope to push or drag them so they no longer are in contact with electrical power.

Once they are no longer contacting electrical power, administer CPR if you are certified, and make sure that emergency medical aid has been requested.

### 3.3 Installing the AP

Please install the AP according to the following steps. Don't forget to pull out the power plug and keep your hands dry.

#### Step 1. PoE and LAN port connection:

- (1) Remove the bottom cover.
- (2) Connect one end of the Ethernet cable into the LAN (Passive PoE) port of the device and the other end to the PoE port on the PoE Injector.
- (3) Connect the power cord with the PoE Injector and plug the other end into an electrical outlet.
- (4) Connect the second Ethernet cable into the LAN port of the PoE Injector and the other end to the Ethernet port on the computer.

Figure 3-1 PoE and LAN port connection

**Step 2.** Attach the antennas onto the antenna connectors of the device and place the bottom cover back into the device to finish the installation.

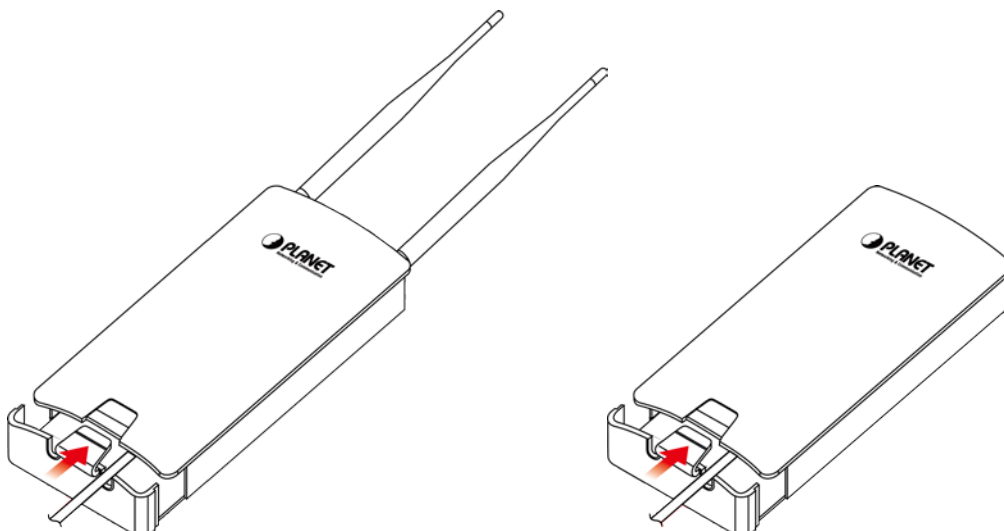

Figure 3-2 Finish installation and connect to antennas (WAP-200N only)

**Step 3. Pole Mounting:**

- (1) Thread two mounting straps through the mounting bracket on the back of the device.
- (2) Position the device on a pole and secure both mounting straps to finish the installation.

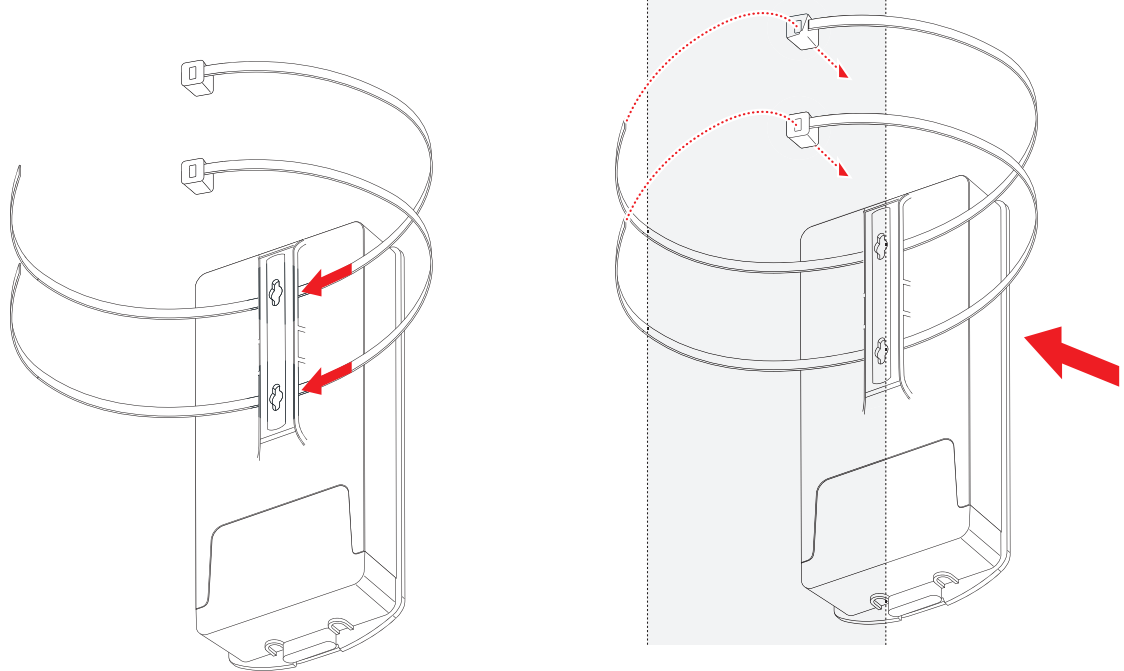

Figure 3-3 Pole Mounting

**Step 4. Wall Mounting:**

- (1) Secure the adhesive label to a position on the wall where you would like to install the device.
- (2) Follow the plotting sticker to drill two holes and secure the plastic anchors.
- (3) Align the screw holes on the mounting bracket with the screws and then install the device on the wall to finish the installation.

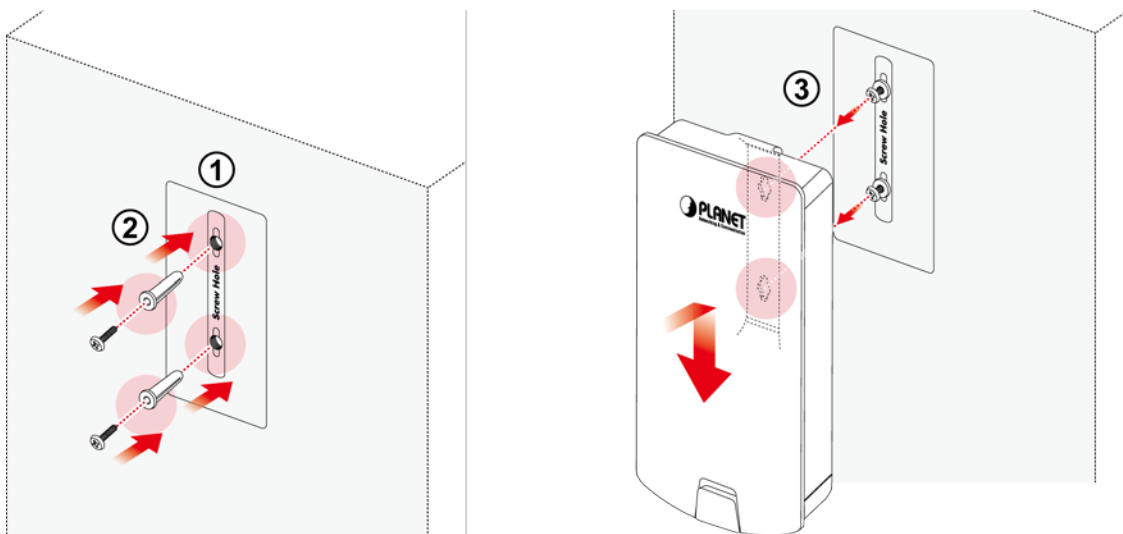

Figure 3-4 Wall Mounting

## Chapter 4. Quick Installation Guide

This chapter will show you how to configure the basic functions of your AP within minutes.

A computer with wired Ethernet connection to the Wireless AP is required for the first-time configuration.

### 4.1 Manual Network Setup -- TCP/IP Configuration

The default IP address of the WBS-200N and WAP-200N is **192.168.1.253**. And the default Subnet Mask is 255.255.255.0. These values can be changed as you desire. In this guide, we use all the default values for description.

Connect the WBS-200N or WAP-200N with your PC via an Ethernet cable which is then plugged into a LAN port of the PoE injector with one end and into a LAN port of the PC with the other end. Then power on the WBS-200N and WAP-200N via PoE injector or PoE switch.

In the following sections, we'll introduce how to install and configure the TCP/IP correctly in **Windows 7**. And the procedures in other operating systems are similar. First, make sure your Ethernet adapter is working, and refer to the Ethernet adapter's manual if needed.

#### 4.1.1 Configuring the IP Address Manually

Summary:

- Set up the TCP/IP Protocol for your PC.
- Configure the network parameters. The IP address is 192.168.1.xxx ("xxx" is any number from 2 to 252), Subnet Mask is 255.255.255.0.

- 1 Select **Use the following IP address** radio button.
- 2 If the AP's LAN IP address is 192.168.1.253, enter IP address 192.168.1.x (x is from 2 to 254 except 192.168.1.253), and **Subnet mask** is 255.255.255.0.
- 3 Select **Use the following DNS server addresses** radio button. In the **Preferred DNS Server** field, you can enter the DNS server IP address which has been provided by your ISP

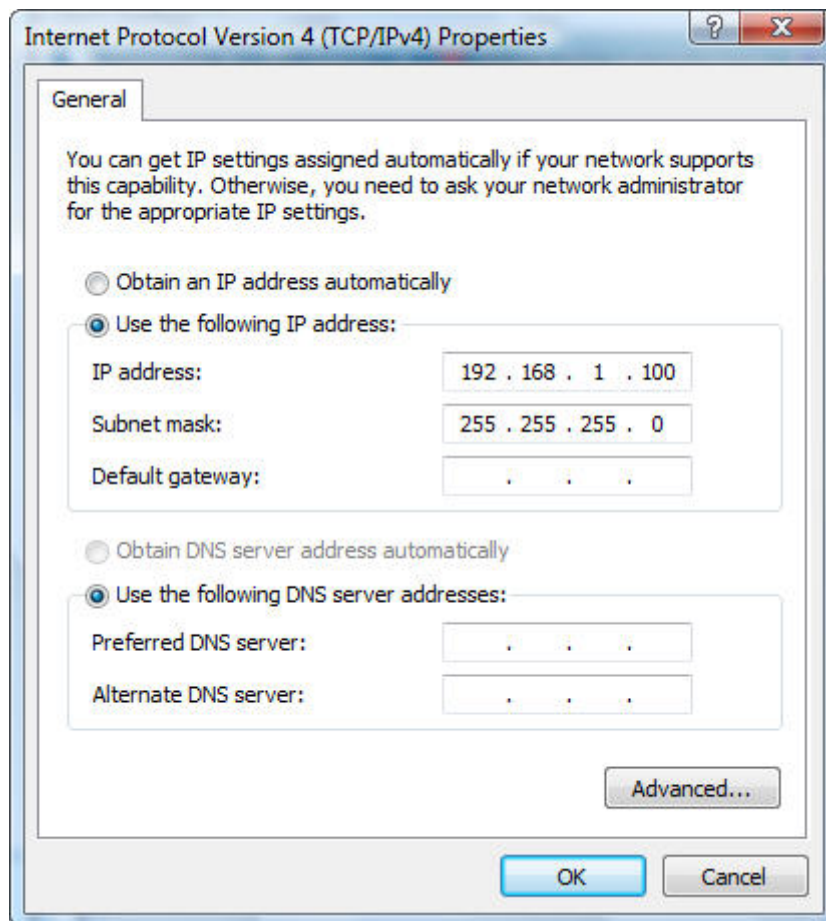

Figure 4-1 TCP/IP Setting

Now click **OK** to save your settings.

Now, you can run the ping command in the **command prompt** to verify the network connection between your PC and the AP. The following example is in **Windows 7** OS. Please follow the Steps below:

1. Click on **Start > Run**.
2. Type "**cmd**" in the Search box.

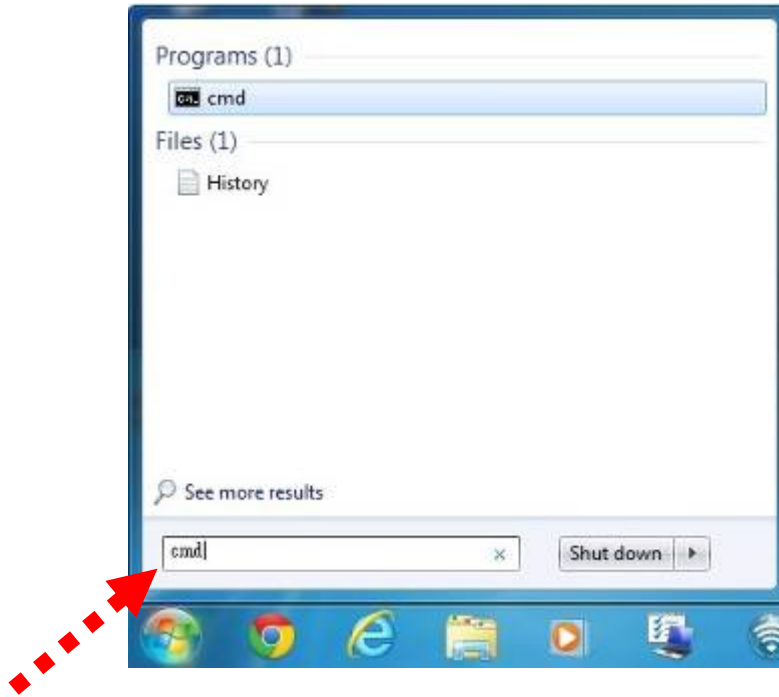

Figure 4-2 Windows Start Menu

3. Open a command prompt and type **ping 192.168.1.253**, and then press **Enter**.

If the result displayed is similar to [Figure 4-3](#), it means the connection between your PC and the AP has been established well.

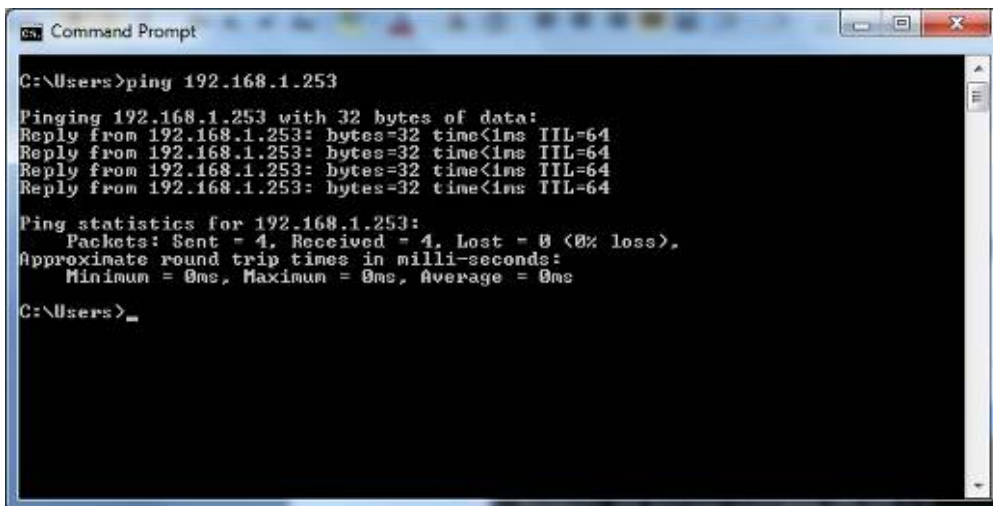

Figure 4-3 Successful result of Ping command

If the result displayed is similar to [Figure 4-4](#), it means the connection between your PC and the AP has failed.

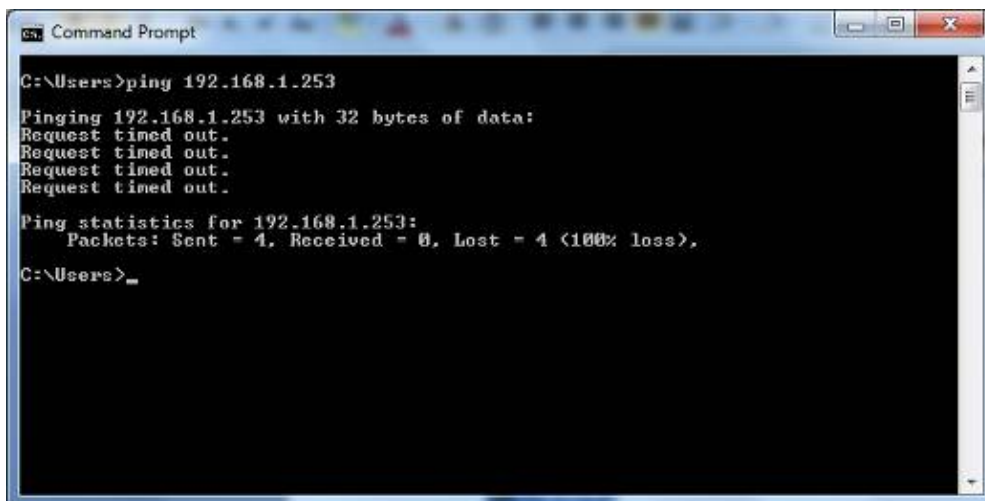

Figure 4-4 Failed result of Ping command

If the address is 0.0.0.0, check your adapter installation, security settings, and the settings on your AP. Some firewall software programs may block a DHCP request on newly installed adapters.

## 4.2 Starting Setup in the Web UI

It is easy to configure and manage the WBS-200N or WAP-200N with the web browser.

**Step 1.** To access the configuration page, open a web browser and enter the default IP address <http://192.168.1.253> in the web address field of the browser.

Figure 4-5 Login by default IP address

After a moment, a login window will appear. Enter **admin** for the User Name and Password, both in lower case letters. Then click the **OK** button or press the **Enter** key.

Figure 4-6 Login Window

Default IP Address: **192.168.1.253**

Default User Name: **admin**

Default Password: **admin**

If the above screen does not pop up, it may mean that your web browser has been set to a proxy. Go to **Tools menu > Internet Options > Connections > LAN Settings** in the screen that appears, cancel the Using Proxy checkbox, and click OK to finish it.

After you enter into the Web User Interface, click **Operation Mode** at the left hand side of the screen to configure the wireless connection. Once the basic configuration of the device is done, go to the **Save/Reload** page to save and apply the changes.

**Figure 4-7** Web UI Screenshot

You can choose an Operation Mode according to your application. Please refer to the instructions in the next chapter for configuring different Operation Modes.

## Chapter 5. Configuring the AP

This chapter instructs you how to quickly configure the AP/CPE in different operation modes.

### 5.1 Operation Mode

On this page, you can select different operation modes of the AP depending on your application, including:

Operation Modes	Description
<ul style="list-style-type: none"> <li>■ <b>Access Point</b></li> </ul>	Access Point mode is used to provide wireless connectivity to wireless clients. This mode is compatible with general wireless clients.
<ul style="list-style-type: none"> <li>■ <b>Client Bridge</b></li> </ul>	Client Bridge mode allows the Access Point to become a wireless client to associate to another AP thus enabling the wireless capability of wired clients.
<ul style="list-style-type: none"> <li>■ <b>WDS Access Point</b></li> </ul>	In WDS Access Point mode, the device functions as a WDS bridge with Access Point Mode. For WDS Access Point, it can be connected by same series of devices which using the WDS station mode. In this mode, the setting is same as Access Point Mode.
<ul style="list-style-type: none"> <li>■ <b>WDS Bridge</b></li> </ul>	<p>In WDS Bridge mode, the device can bridge with remote LAN networks through MAC address. This application can create two individual networks for two groups of users sharing one Internet. The advantage of WDS is the Layer 2 transparent bridging and broadcasting across wireless connections so that all connected network devices form one common broadcast domain.</p> <p><b>NOTE: The WDS mode is a non-standard extension to the IEEE 802.11 standard, which implemented differently in wireless driver and firmware making them incompatible with each other. In order to use WDS, the same model of devices should be used.</b></p>
<ul style="list-style-type: none"> <li>■ <b>WDS Station</b></li> </ul>	In WDS Station mode, the device functions as a wireless client which can bridge the remote WDS Access Point with SSID. In this mode, the setting is same as Client Bridge mode.
<ul style="list-style-type: none"> <li>■ <b>Client Router</b></li> </ul>	<p>With Client Router (Wireless ISP) mode, the device can connect to a wireless network and share the Internet connection to the WISP subscribers.</p> <p>On the LAN side, the device acts like a wired router for IP sharing function. In this mode, the wireless interface acts as WAN side.</p>
<ul style="list-style-type: none"> <li>■ <b>Repeater</b></li> </ul>	Repeater mode is used to extend the wireless coverage with same SSID and security.

Go to “**System → Operation Mode**” page to configure the device in the operation mode which is suitable for your application. Then go to “**Wireless → Wireless Network**” to configure the related wireless settings of each mode.

**System Properties** Home Reset

**System Properties**

- Client Router
- Repeater

Save & Apply Cancel

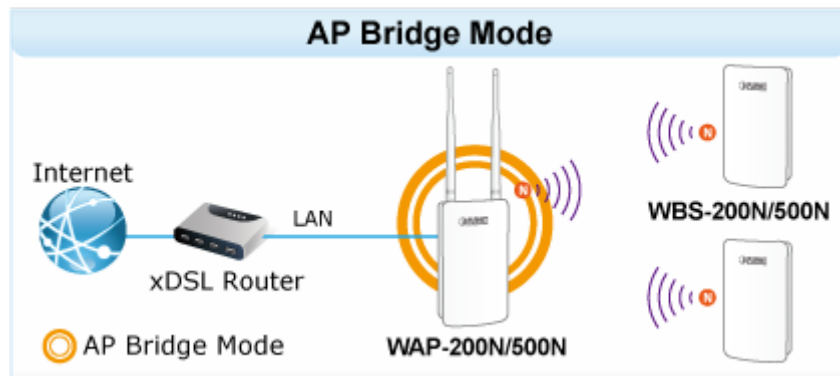

Figure 5-1 Operation Mode – All

The page includes the following settings:

Object	Description
• <b>Device Name</b>	Enter a name for the device (1-32 characters). The name you type appears in SNMP management. This name is not the SSID and is not broadcast to other devices.
• <b>Green</b>	Disable the green option to enable transmit power to be configured manually. <a href="#">Keep it as default setting to prevent violating regional regulation unless your configuration meets the regulation.</a>
• <b>Country/Region</b>	Select a Country/Region to conform to local regulations.
• <b>Operation Mode</b>	Use the radio button to select an operation mode.
• <b>Save &amp; Apply</b>	Click <b>Save &amp; Apply</b> to save changes.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the unsaved changes and revert to the previous settings.

### 5.1.1 Access Point (AP)

This section allows you to configure the AP Bridge mode to provide wireless connectivity for wireless clients.

Go to the “**System → Operation Mode**” page to configure the device as “**Access Point**” and then go to “**Wireless → Wireless Network**” to configure the related wireless settings.

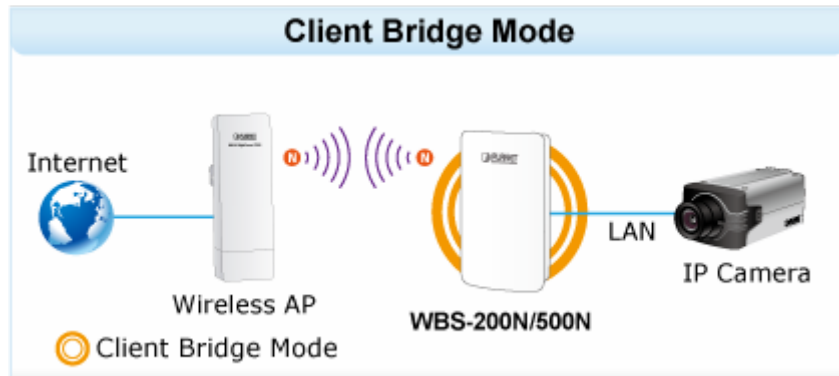

System Properties		Home	Reset
<b>System Properties</b>			
Device Name	PLANET (1 to 32 characters)	<input checked="" type="checkbox"/>	Green

Save & Apply		Cancel	

Figure 5-2 Operation Mode – AP

For the configuration example, please refer to the section “[Appendix C: FAQ, Q1](#)”.

### 5.1.2 Client Bridge (CB)

This section allows you to configure the Client Bridge mode. In this mode, the device enables the wired client to be connected to the central site through wireless interface.

Go to the “**System → Operation Mode**” page to configure the device as “**Client Bridge**” and then go to “**Wireless → Wireless Network**” to configure the related wireless settings.

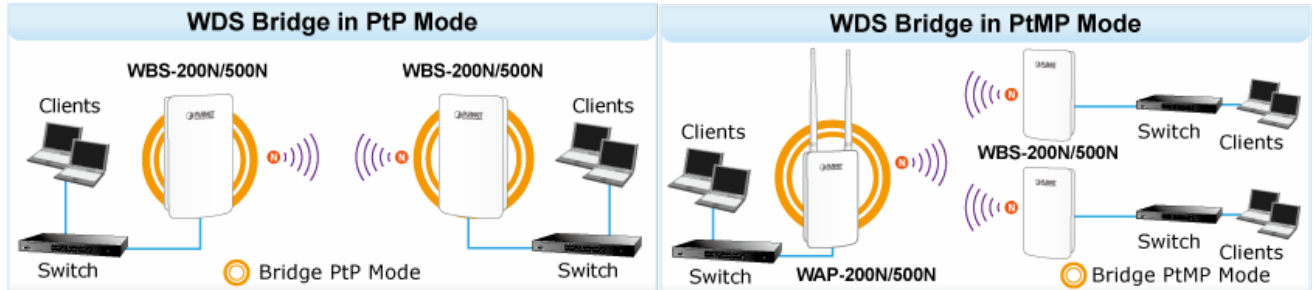

System Properties		Home	Reset
<b>System Properties</b>			
Device Name	PLANET (1 to 32 characters)	<input checked="" type="checkbox"/>	Green

Figure 5-3 Operation Mode – Client Bridge

For the configuration example, please refer to the section “[Appendix C: FAQ, Q1](#)”.

### 5.1.3 WDS Access Point (WDS AP)

This section allows you to configure the WDS AP mode. In this mode, the device is acting as master AP in the WDS connection.

Go to the “**System → Operation Mode**” page to configure the device as “**WDS Access Point**” and then go to “**Wireless → Wireless Network**” to configure the related wireless settings.

## System Properties

### 5.1.5 WDS Bridge (WDS PtP/WDS PtMP)

This section allows you to configure the WDS Bridge mode. In this mode, the device is bridging to remote node through wireless MAC address. When suppressed **SSID broadcast** is checked, unknown wireless clients are not allowed to connect to the AP.

Go to the “**System → Operation Mode**” page to configure the device as “**WDS Bridge**” and then go to “**Wireless → WDS Link Settings**” to configure the WDS bridge mode in PtP (Point to Point) or PtMP (Point to Multiple Points) applications.

System Properties		Home	Reset
<b>System Properties</b>			
Device Name	PLANET (1 to 32 characters)	<input checked="" type="checkbox"/>	Green

Save & Apply		Cancel	

Figure 5-6 Operation Mode – WDS Bridge

#### Configuration Example

The following procedure will guide you to how to establish WDS connection.

**Step 1.** Go to the “**Operation Mode**” page to configure the device as “**WDS Bridge**”.

System Properties		Home	Reset
<b>System Properties</b>			
Device Name	PLANET (1 to 32 characters)	<input checked="" type="checkbox"/>	Green
Country/Region	Please Select a Country Code ▾		
Operation Mode	<input type="radio"/> Access Point <input type="radio"/> Client Bridge <input checked="" type="radio"/> WDS <input type="radio"/> Access Point <input checked="" type="radio"/> Bridge <input type="radio"/> Station <input type="radio"/> Client Router <input type="radio"/> Repeater		
Save & Apply		Cancel	

**Step 2.** Go to the “**System → IP Settings**” page to configure LAN IP of central site and remote site. **The LAN IP must be different at both sites.** In this example, the master AP at the central site is configured to 192.168.1.252 and the slave AP at remote site is configured to 192.168.1.253.

IP Settings		Home	Reset
<b>System Information</b>			
IP Network Setting	<input type="radio"/> Obtain an IP address automatically (DHCP) <input checked="" type="radio"/> Specify an IP address		
IP Address	192 . 168 . 1 . 253		
IP Subnet Mask	255 . 255 . 255 . 0		
Default Gateway	192 . 168 . 1 . 253		
Primary DNS	0 . 0 . 0 . 0		
Secondary DNS	0 . 0 . 0 . 0		
Use Link-Local Address	<input checked="" type="checkbox"/>		
IPv6 IP Address			
IPv6 Subnet Prefix Length			
IPv6 Default Gateway			
IPv6 Primary DNS			
IPv6 Secondary DNS			
Accept		Cancel	

**Step 3.** Go to the “**Wireless → Wireless Network**” page to configure the wireless parameters of the WDS link. In this example, we set the channel to 6 and channel width to 40MHz.

- (1) Channel HT Mode: set to 40MHz for wider bandwidth to optimize performance
- (2) Channel/Frequency: set to a fixed channel. For the WDS link, the fixed channel must be used.

Wireless Network		Home	Reset
Wireless Mode	802.11 B/G/N Mixed ▾		
Channel HT Mode	40MHz ▾		
Extension Channel	Lower Channel ▾		
Channel / Frequency	Ch6-2.437GHz ▾		
<input type="button" value="Accept"/> <input type="button" value="Cancel"/>			

**Step 4.** Go to the “**Wireless → WDS Link Settings**” page to enter the wireless MAC of the remote node and add encryption to protect the WDS link. Click **Accept** to save the changes.

- (1) In PtMP of the master node: enter the wireless MAC of each remote slave node up to 4 entries.
- (2) In PtMP, the distance from each slave node must be configured to the actual distance from each slave node to the master node. As to the master node, it should be configured to the value of the farthest node. In PtMP application, the distance from each node to master node should not have too much deviation to ensure the connection stability.

## WDS Link Settings

### 5.1.6 Client Router (CR/WISP)

This section allows you to configure the Client Router (Wireless ISP) mode to enable clients to access Internet through remote wireless AP provided by ISP. In this mode, the DHCP server is enabled and able to assign IP address to local clients after the device is connected to remote wireless AP provided by ISP.

Go to the “**System → Operation Mode**” page to configure the device as “**Client Router**” and then go to “**Wireless → Wireless Network**” to configure the related wireless settings.

System Properties		Home	Reset
<b>System Properties</b>

## 5.1.7 Repeater

This section allows you to configure the Repeater mode to extend the root AP's signal coverage.

Go to the “**System → Operation Mode**” page to configure the device as “**Repeater**” and then go to “**Wireless → Wireless Network**” to configure the related wireless settings.

System Properties		Home	Reset
<b>System Properties</b>			
Device Name	PLANET (1 to 32 characters)	<input checked="" type="checkbox"/>	Green
Country/Region	Please Select a Country Code ▾		
Operation Mode	<input type="radio"/> Access Point <input type="radio"/> Client Bridge <input type="radio"/> WDS <input type="radio"/> Client Router <input checked="" type="radio"/> Repeater		
Save & Apply		Cancel	

Figure 5-8 Operation Mode – Repeater

### Configuration Example

The following procedure will guide you to how to establish repeater connection.

**Step 1.** Go to “**Operation Mode**” page to configure the device as “**Repeater**”.

System Properties		Home	Reset
<b>System Properties</b>			
Device Name	<input type="text" value="PLANET"/> (1 to 32 characters)	<input checked="" type="checkbox"/>	Green
Country/Region	<input type="text" value="Please Select a Country Code"/>		
Operation Mode	<input type="radio"/> Access Point <input type="radio"/> Client Bridge <input type="radio"/> WDS <input type="radio"/> Client Router <input checked="" type="radio"/> Repeater		
<input type="button" value="Save &amp; Apply"/> <input type="button" value="Cancel"/>			

**Step 2.** Go to the “Wireless → Wireless Network” page to click the **Site Survey** button to discover the root AP.

Wireless Network		Home	Reset
Wireless Mode	<input type="text" value="802.11 B/G/N Mixed"/>		
SSID	Specify the static SSID : <input type="text" value="AP SSID"/> (1 to 32 characters) Or press the button to search for any available WLAN Service. <input checked="" type="button" value="Site Survey"/>		
Repeater SSID	<input type="text" value="AP SSID"/> (1 to 32 characters)		
Preferred BSSID	<input type="checkbox"/> <input type="text" value=""/> : <input type="text" value=""/> : <input type="text" value=""/> : <input type="text" value=""/> : <input type="text" value=""/> : <input type="text" value=""/>		
<b>Wireless Security</b>			
Changing the wireless security settings may cause this wireless client to associate with a different one. This may temporarily disrupt your configuration session.			
Security Mode	<input type="text" value="Disabled"/>		
<input type="button" value="Accept"/> <input type="button" value="Cancel"/>			

**Step 3.** Click the **root AP** as shown below and it will go back to the previous wireless network page.

## Site Survey

### 2.4GHz Site Survey

:Infrastructure :Ad\_hoc

BSSID	SSID	Channel	Signal Level	Type	Security	Mode
A8:F7:E0:42:12:83	PLANET1	1	-57 dBm	11g/n	WPA2-PSK	
00:30:4F:CE:94:63	CHT Wi-Fi Auto	5	-80 dBm	11g/n	WPA/WPA2	
C8:3A:35:24:65:7C	11F_Demo_Room	6	-83 dBm	11g/n	WPA2-PSK	

Refresh

**Step 4.** Click the check box of the preferred BSSID and configure the encryption to be the same as the root AP. The Repeater SSID can be modified to an easily-recognized name for wireless clients. Then, click “Accept” to save the configurations.

Accept
Cancel

**Step 5.** Go to the “Status-> Save/Reload” page to save and apply settings.

**Step 6.** Use a wireless client to connect to the repeater AP and ensure it is able to receive IP address from the root AP's network.

## 5.2 Status

This section provides the current system summary, system log and connection status including Wireless Client List, WDS Link List, DHCP Client Table and Connection Status to assist the administrator in viewing the network status.

In the upper-right corner of each function page, you can click "**Home**" to go back to the **Main** page to view the current system status and click "**Reset**" to force the system to reboot or reset the device to factory defaults.

**Figure 5-9** System Menu - Reset

In the upper-right corner of each function page, you can choose the **Language** supported in the system from the drop-down list for better user experience. Once the language is chosen, the whole web page will be translated in the language.

**Figure 5-10** System Menu – Language option

### 5.2.1 Main

Click "**Status → Main**" to view the current system summary.

wireless.cfg039f7e.WLANWpaRadiusAccSrvIP=...
wireless.cfg039f7e.hidden=0
wireless.cfg039f7e.server=...
wireless.wifi0.WLANHTMode=40
wireless.wifi0.WLANExtChannel=0
wireless.wifi0.channel=1
wireless.cfg09feac.WLANVLANEnable=0
```

At the bottom of the page, the 'Save & Apply' button is highlighted in red, along with a 'Revert' button.

Figure 5-12 Save/Reload

Click **Save & Apply** to save and apply all configurations.

Click **Revert** to cancel the unsaved changes and revert to the previous settings that have been saved.

It's not necessary to save and apply the settings if unsaved changes list is empty.

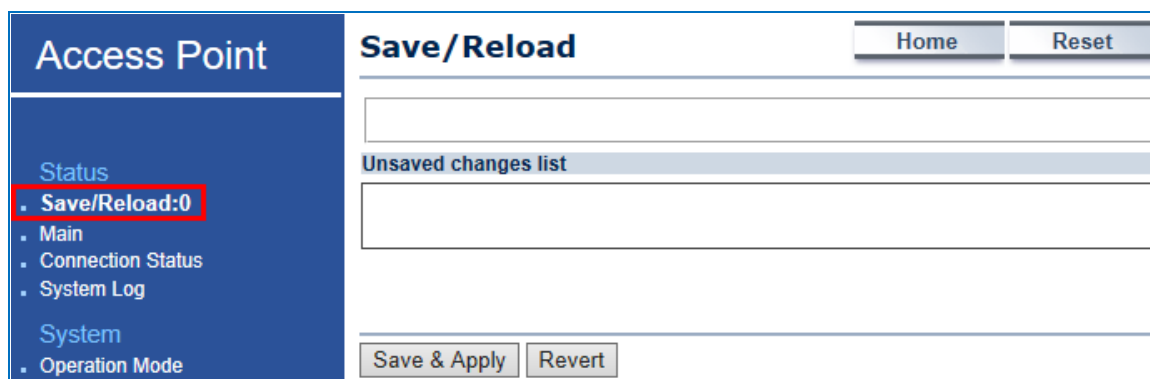

Figure 5-13 Save/Reload - Default

### 5.2.3 Wireless Client List

Click “**Status** → **Wireless Client List**” to view the current associated client.

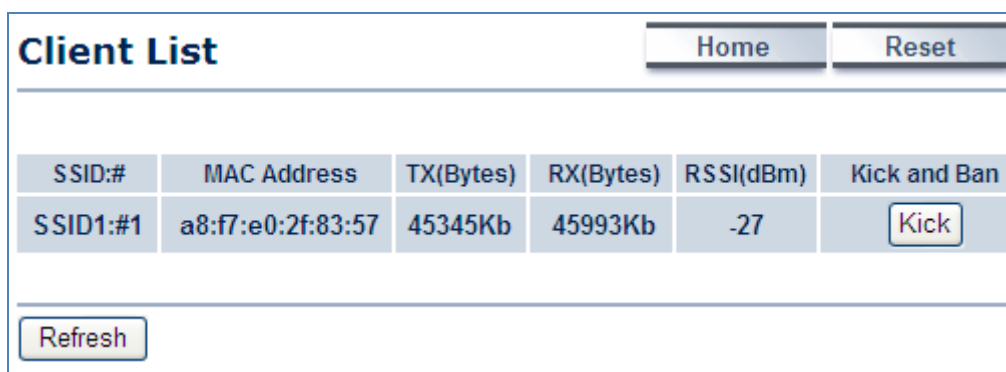

Figure 5-14 Wireless Client List

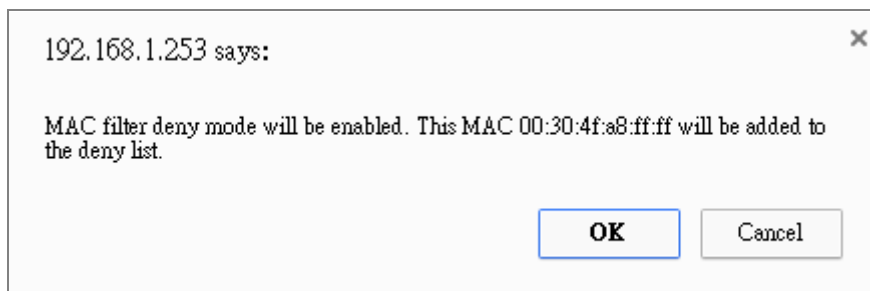

Figure 5-15 Kick the client

The page includes the following settings:

Object	Description
• <b>SSID:#</b>	The SSID number that the client associated to.
• <b>MAC Address</b>	The MAC Address of the associated client.
• <b>TX (Bytes)</b>	The current transmit packet of the associated client.
• <b>RX (Bytes)</b>	The current received packet of the associated client.
• <b>RSSI (dBm)</b>	The current signal strength of the associated client.
• <b>Kick and Ban</b>	Click <b>Kick</b> to add the client to the wireless mac filtering deny list.

## 5.2.4 WDS Link List

Click “**Status** → **WDS Link List**” to view the current WDS link client.

The **WDS Link List** is only available in WDS Bridge mode.

WDS Link Status				Home	Reset
WDS Link ID	MAC Address	Link Status	RSSI (dBm)		
1	a8:f7:e0:2f:83:57	UP	-35		
Refresh					

Figure 5-16 WDS Link Status

The page includes the following settings:

Object	Description
• <b>WDS Link ID</b>	The sequence number of the WDS link.
• <b>MAC Address</b>	The MAC Address of the associated remote node.
• <b>Link Status</b>	The current link status.
• <b>RSSI (dBm)</b>	The current signal strength of the associated remote node.
• <b>Refresh</b>	Click <b>Refresh</b> to update the current list.

## 5.2.5 DHCP Client Table

Click “**Status** → **DHCP Client Table**” to view the current DHCP client.

The **DHCP Client Table** is only available in Client Router (WISP) mode.

DHCP Client List						Home	Reset
MAC Address	IP	Host Name	Expires	Revoke	Reserve

Refresh							

Figure 5-17 DHCP Client List

The page includes the following settings:

Object	Description
• <b>MAC Address</b>	The MAC Address of the DHCP client.
• <b>IP</b>	The IP assigned to the DHCP client.
• <b>Host Name</b>	The Host Name of the DHCP client.
• <b>Expires</b>	The Expiry time of the DHCP client.

• <b>Revoke</b>	Click <b>Revoke</b> to revoke the DHCP lease of the client.
• <b>Reserve</b>	Click <b>Reserve</b> to reserve the IP to the client.
• <b>Refresh</b>	Click <b>Refresh</b> to update the client list.

## 5.2.6 Connection Status

Click “**Status → Connection Status**” to view the current DHCP client.

The **Connection Status** is only available in the following operation modes:

- (1) Client Bridge
- (2) Client Router
- (3) WDS Station
- (4) Repeater

<b>Connection Status</b>		Home	Reset
<b>Network Type</b>	Client Bridge		
<b>SSID</b>	PLANET1		
<b>BSSID</b>	A8:F7:E0:04:B4:C0		
<b>Connection Status</b>	Associated		
<b>Wireless Mode</b>	IEEE 802.11B/G/N Mixed		
<b>Current Channel</b>	2.412 GHz(Channel 1 )		
<b>Security</b>	WPA2-PSK AES		
<b>Tx Data Rates(Mbps)</b>	300 Mbps		
<b>Current noise level</b>	-95 dBm		
<b>Signal strength</b>	-60 dBm		
Refresh			

**Figure 5-18** Connection Status

The page includes the following settings:

<b>Object</b>	<b>Description</b>
• <b>Network Type</b>	The current operation mode of the device.
• <b>SSID</b>	The SSID of the connected AP.
• <b>BSSID</b>	The MAC Address of the connected AP.
• <b>Connection Status</b>	The status of the connection.
• <b>Wireless Mode</b>	The current wireless mode of the AP.
• <b>Current Channel</b>	The current channel used of this connection.
• <b>Security</b>	The encryption method of the AP.
• <b>Tx Data Rates (Mbps)</b>	The current data rates of the connection.

• <b>Current noise level</b>	The current noise level of the connection
• <b>Signal Strength</b>	The current signal strength of the connected AP.
• <b>Refresh</b>	Click <b>Refresh</b> to update the current data.

### 5.2.7 System Log

Click “**Status → System Log**” to view the system log.

The screenshot shows the 'System Log' interface. At the top right, there are 'Home' and 'Reset' buttons. Below the title, there is a 'Show log type' dropdown menu currently set to 'All'. The main area contains a scrollable list of log entries. Each entry includes a date and time (e.g., 'May 22 15:'), a log level (e.g., 'Debug', 'Warning'), and a message (e.g., 'ON user.notice root: starting ntpd'). At the bottom of the interface, there are three buttons: 'Save', 'Refresh', and 'Clear'.

Figure 5-19 System Log

The page includes the following settings:

Object	Description
• <b>Show log type</b>	Select log type to filter the records.
• <b>Save</b>	Click <b>Save</b> to save the records.
• <b>Refresh</b>	Click <b>Refresh</b> to update the current data.
• <b>Clear</b>	Click <b>Clear</b> to erase the records.

## 5.3 System

### 5.3.1 IP Settings

Click “**System → IP Settings**” to configure the LAN IP address.

IP Settings		Home	Reset
<b>System Information</b>			
IP Network Setting	<input type="radio"/> Obtain an IP address automatically (DHCP) <input checked="" type="radio"/> Specify an IP address		
IP Address	192	168	1 . 253
IP Subnet Mask	255	255	255 . 0
Default Gateway	192	168	1 . 253
Primary DNS	0	0	0 . 0
Secondary DNS	0	0	0 . 0
Use Link-Local Address	<input checked="" type="checkbox"/>		
IPv6 IP Address	<input type="text"/>		
IPv6 Subnet Prefix Length	<input type="text"/>		
IPv6 Default Gateway	<input type="text"/>		
IPv6 Primary DNS	<input type="text"/>		
IPv6 Secondary DNS	<input type="text"/>		
<input type="button" value="Accept"/> <input type="button" value="Cancel"/>			

Figure 5-20 LAN IP Settings

The page includes the following settings:

Object	Description
• IP Network Setting	Select <b>Obtain an IP address automatically (DHCP)</b> to receive the IP from DHCP server. Select <b>Specify an IP address</b> to configure the AP to use static IP.
• IP Address	The LAN IP of the AP. The default is <b>192.168.1.253</b> . You can change it according to your needs.
• IP Subnet Mask	The LAN subnet mask of the AP.
• Default Gateway	Enter the Gateway IP address of the AP.
• Primary DNS	Enter the primary DNS server of the AP.
• Secondary DNS	Enter the secondary DNS server of the AP.
• Use Link-Local Address	Click to enable a link-local address for the AP.

• IPv6 IP Address	Enter the IPv6 LAN IP of the AP.
• IPv6 Subnet Prefix Length	Enter the secondary DNS server of the AP.
• IPv6 Default Gateway	Enter the IPv6 Gateway IP address of the AP.
• IPv6 Primary DNS	Enter the IPv6 primary DNS server of the AP.
• IPv6 Secondary DNS	Enter the IPv6 secondary DNS server of the AP.
• Accept	Click <b>Accept</b> to apply the new settings.
• Cancel	Click <b>Cancel</b> to cancel the unsaved changes and revert to the previous settings.

### 5.3.2 Spanning Tree Settings (STP)

The Spanning Tree Settings (STP) protocol allows network to provide a redundant link in the event of a link failure. It is advised to turn on this option for multi-point bridge network to avoid network loop.

Click "**System → Spanning Tree Settings**" to enable/disable Spanning Tree Settings.

Spanning Tree Settings <span style="float: right;">Home Reset</span>	
Spanning Tree Status	<input type="radio"/> ON <input checked="" type="radio"/> OFF
Bridge Hello Time	<input type="text" value="2"/> seconds (1-10)
Bridge Max Age	<input type="text" value="20"/> seconds (6-40)
Bridge Forward Delay	<input type="text" value="4"/> seconds (4-30)
Priority	<input type="text" value="32768"/> (0-65535)
Accept Cancel	

**Figure 5-21** Spanning Tree Settings

The page includes the following settings:

Object	Description
• Spanning Tree Status	Click <b>ON</b> to enable or click <b>OFF</b> to disable the option.
• Bridge Hello Time	Specify Bridge Hello Time, in seconds. This value determines how often the AP sends hello packets to communicate information about the topology throughout the entire Bridged Local Area Network.
• Bridge Max Age	Specify Bridge Max Age, in seconds. If another bridge in the spanning tree does not send a hello packet for a long period of time, it is assumed to be dead.
• Bridge Forward Delay	Specify Bridge Forward Delay, in seconds. Forwarding delay time is the time spent in each of the Listening and Learning states before the

	Forwarding state is entered. This delay is provided so that when a new bridge comes onto a busy network, it looks at some traffic before participating.
• <b>Priority</b>	Specify the Priority number. Smaller numbers have greater priority.
• <b>Accept</b>	Click <b>Accept</b> to apply the setting.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the setting.

## 5.4 Router (WISP Mode Only)

### 5.4.1 DHCP Server Settings

Go to the “**Operation Mode**” page to configure the device as “**Client Router**” and then go to “**Router → LAN Settings**” to configure the device’s LAN IP settings in client router mode.

On this page, enable the DHCP server to assign IP address to local wired/wireless clients after the device is connected to the remote AP supplied by wireless ISP.

The screenshot shows the 'LAN Settings' configuration page. At the top right are 'Home' and 'Reset' buttons. The 'LAN IP Setup' section contains:
 

- IP Address:** 192 . 168 . 1 . 253
- IP Subnet Mask:** 255 . 255 . 255 . 0

 Below this is the 'Use Router As DHCP Server' section, which is checked. It includes:
 

- Starting IP Address:** 192 . 168 . 1 . 100
- Ending IP Address:** 192 . 168 . 1 . 200
- WINS Server IP:** 0 . 0 . 0 . 0

 At the bottom are 'Accept' and 'Cancel' buttons.

**Figure 5-22** DHCP Server Settings

The page includes the following settings:

Object	Description
• <b>IP Address</b>	The LAN IP of the AP.
• <b>IP Subnet Mask</b>	The LAN subnet mask of the AP.
• <b>Use Router As DHCP Server</b>	Select it to enable DHCP server. In here the device is acting as a router.
• <b>Starting IP Address</b>	Specify the starting IP address for the DHCP range.

• <b>Ending IP Address</b>	Specify the ending IP address for the DHCP range.
• <b>WINS Server IP</b>	Enter the IP address of the WINS server.
• <b>Accept</b>	Click <b>Accept</b> to apply the setting.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the setting.

## 5.4.2 WAN Settings

Go to the “**Operation Mode**” page to configure the device as “**Client Router**” and then go to “**Router → WAN Settings**” to configure the device’s WAN settings in client router mode. The WAN settings should be provided by the ISP.

Figure 5-23 WAN Settings – All

The page includes the following common settings in each Internet Connection Type:

Object	Description
• <b>Internet Connection Type</b>	<ul style="list-style-type: none"> <li>• <b>DHCP:</b> Dynamic IP addressing assigns a different IP address each time a device connects to an ISP service provider.</li> <li>• <b>Static IP:</b> Setting a static IP address allows an administrator to set a specific IP address for the router and guarantees that it cannot be</li> </ul>

	<p>assigned a different address.</p> <ul style="list-style-type: none"> <li>• <b>PPPoE:</b> Point-to-Point Protocol over Ethernet (PPPoE) is used mainly by ISPs that provide DSL modems to connect to the Internet.</li> <li>• <b>PPTP:</b> The point-to-point tunneling protocol (PPTP) is used in association with virtual private networks (VPNs).</li> </ul>
<p><b>Options:</b> This section will not be the same depending on the Internet Connection Type. Refer to settings of each corresponding section from 5.4.2.1 to 5.4.2.4</p>	
<p><b>Domain Name Server (DNS) Address</b></p>	
<ul style="list-style-type: none"> <li>• <b>Get Automatically From ISP</b></li> </ul>	Select it to obtain the DNS automatically from the DHCP server.
<ul style="list-style-type: none"> <li>• <b>Use These DNS Servers</b></li> </ul>	Select it to set up the Primary DNS and Secondary DNS servers manually.
<ul style="list-style-type: none"> <li>• <b>Primary DNS</b></li> </ul>	Enter the primary DNS server address.
<ul style="list-style-type: none"> <li>• <b>Secondary DNS</b></li> </ul>	Enter the secondary DNS server address.
<p><b>WAN Ping</b></p>	
<ul style="list-style-type: none"> <li>• <b>Discard Ping on WAN</b></li> </ul>	Check it to enable pings on the WAN interface or disable to block pings on the WAN interface.
<ul style="list-style-type: none"> <li>• <b>Accept</b></li> </ul>	Click <b>Accept</b> to apply the setting.
<ul style="list-style-type: none"> <li>• <b>Cancel</b></li> </ul>	Click <b>Cancel</b> to cancel the setting.

#### 5.4.2.1. DHCP

Select **DHCP** and the device will automatically obtain IP addresses, subnet masks and gateway addresses from the ISP.

Figure 5-24 WAN Settings – DHCP

The page includes the following specific settings in DHCP type:

Object	Description
<ul style="list-style-type: none"> <li>• <b>Account Name (if required)</b></li> </ul>	Enter the account name provided by your ISP.
<ul style="list-style-type: none"> <li>• <b>Domain Name (if required)</b></li> </ul>	Enter the domain name provided by your ISP.
<ul style="list-style-type: none"> <li>• <b>MTU</b></li> </ul>	The maximum transmission unit (MTU) specifies the largest packet size permitted for an internet transmission. The factory default MTU size for DHCP is 1500. The MTU size can be set between 576 and 1500.
<ul style="list-style-type: none"> <li>• <b>Accept</b></li> </ul>	Click <b>Accept</b> to apply the setting.
<ul style="list-style-type: none"> <li>• <b>Cancel</b></li> </ul>	Click <b>Cancel</b> to cancel the setting.

#### 5.4.2.2. Static IP

If your ISP offers you static IP Internet connection type, select **Static IP** and then enter IP address, subnet mask, primary DNS and secondary DNS information provided by ISP in the corresponding fields.

• <b>Account Name (if required)</b>	Enter the account name provided by your ISP.
• <b>Domain Name (if required)</b>	Enter the domain name provided by your ISP.
• <b>MTU</b>	The maximum transmission unit (MTU) specifies the largest packet size permitted for an internet transmission. The factory default MTU size for static IP is 1500. The MTU size can be set between 576 and 1500.
• <b>IP Address</b>	Enter the device's WAN IP address provided by ISP.
• <b>IP Subnet Mask</b>	Enter the device's WAN IP subnet mask provided by ISP.
• <b>Gateway IP Address</b>	Enter the device's WAN Gateway IP provided by ISP.
• <b>Accept</b>	Click <b>Accept</b> to apply the setting.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the setting.

## 5.4.2.3. PPPoE

Select **PPPOE** if ISP is using a PPPoE connection and provide you with PPPoE user name and password.

**WAN Settings** Home Reset

Internet Connection Type: **PPPoE**

**Options**

MTU: **Auto** ( 576 - 1492 )

**PPPoE Options**

Login: **admin**

Password: **.....**

Service Name (if required):

Connect on Demand: Max idle Time **1** Minutes

Keep Alive: Redial Period **30** Seconds

**Domain Name Server (DNS) Address**

Get Automatically From ISP

Use These DNS Servers

Primary DNS: **0 . 0 . 0 . 0**

Secondary DNS: **0 . 0 . 0 . 0**

**WAN Ping**

Discard Ping on WAN:

Accept Cancel

**Figure 5-26** WAN Settings – PPPOE

The page includes the following specific settings in PPPoE type:

Object	Description
• <b>MTU</b>	The maximum transmission unit (MTU) specifies the largest packet size permitted for an internet transmission. The factory default MTU size for PPPoE is 1492. The MTU size can be set between 576 and 1492.
• <b>Login</b>	Enter the username provided by ISP.
• <b>Password</b>	Enter the password provided by ISP.
• <b>Service Name (if required)</b>	Enter the service name of an ISP (optional).
• <b>Connect on Demand</b>	Select it to specify the maximum idle time. Internet connection will disconnect when it reaches the maximum idle time, but it will

	automatically connect when user tries to access the network.
<ul style="list-style-type: none"> <li>• <b>Keep Alive</b></li> </ul>	Select whether to keep the Internet connection always on, or enter a redial period once the internet loses connection.
<ul style="list-style-type: none"> <li>• <b>Accept</b></li> </ul>	Click <b>Accept</b> to apply the setting.
<ul style="list-style-type: none"> <li>• <b>Cancel</b></li> </ul>	Click <b>Cancel</b> to cancel the setting.

#### 5.4.2.4. PPTP

Select **PPTP** if ISP is using a PPTP connection.

### WAN Settings

Figure 5-27 WAN Settings – PPTP

The page includes the following specific settings in PPTP type:

Object	Description
• <b>MTU</b>	The maximum transmission unit (MTU) specifies the largest packet size permitted for an internet transmission. The factory default MTU size for PPTP is 1400. The MTU size can be set between 1200 and 1400.
• <b>IP Address</b>	Enter the device's WAN IP address provided by ISP.
• <b>Subnet Mask</b>	Enter the device's WAN IP subnet mask provided by ISP.
• <b>Default Gateway</b>	Enter the device's WAN Gateway IP provided by ISP.
• <b>PPTP Server</b>	Enter the IP address of the PPTP server.
• <b>Username</b>	Enter the username provided by ISP.
• <b>Password</b>	Enter the password provided by ISP.
• <b>Connect on Demand</b>	Select it to specify the maximum idle time. Internet connection will disconnect when it reaches the maximum idle time, but it will automatically connect when user tries to access the network.
• <b>Keep Alive</b>	Select whether to keep the Internet connection always on, or enter a redial period once the internet loses connection.
• <b>Accept</b>	Click <b>Accept</b> to apply the setting.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the setting.

### 5.4.3 VPN Pass Through

VPN Pass-through allows a secure virtual private network (VPN) connection between two sites. Enabling the options on this page opens a VPN port and enables connections to pass through the AP without interruption.

Go to the “**Operation Mode**” page to configure the device as “**Client Router**” and then go to “**Router → VPN Pass Through**” to enable VPN pass through you required in client router mode.

The screenshot shows a web interface for configuring VPN Pass Through. The title is "VPN Pass Through" and there are "Home" and "Reset" buttons in the top right. Below the title, there are three checked checkboxes: "PPTP Pass Through", "L2TP Pass Through", and "IPSec Pass Through". At the bottom of the form, there are "Accept" and "Cancel" buttons.

Figure 5-28 VPN Pass Through

The page includes the following settings:

Object	Description
• PPTP Pass Through	Check this option to enable PPTP pass-through mode.
• L2TP Pass Through	Check this option to enable L2TP pass-through mode.
• IPSec Pass Through	Check this option to enable IPSec pass-through mode.
• Accept	Click <b>Accept</b> to apply the setting.
• Cancel	Click <b>Cancel</b> to cancel the setting.

#### 5.4.4 Port Forwarding

Go to “**Operation Mode**” page to configure the device as “**Client Router**” and then go to “**Router → Port Forwarding**” to enable VPN pass through you required in client router mode.

Figure 5-29 Port Forwarding

The page includes the following settings:

Object	Description
• #	Displays the sequence number of the forwarded port.
• Name	Displays the name of the forwarded port.
• Protocol	Displays the protocol to use for mapping from the following: TCP, UDP or Both.
• Start Port	Displays the LAN port number that WAN client packets will be forward to.
• End Port	Displays the port number that the WAN client packets are received.
• Server IP Address	Displays the IP address of the server for the forwarded port.
• Enable	Click to enable or disable the forwarded port profile.
• Modify	Click to modify the forwarded port profile.
• Delete	Click to delete the forwarded port profile.
• Add Entry	Click <b>Add Entry</b> to add the new forwarding rule.
• Accept	Click <b>Accept</b> to apply the setting.

When clicking **Add Entry**, the following window will pop up and fill in the fields required to add a new forwarding rule.

**Figure 5-30** Port Forwarding

The page includes the following settings:

Object	Description
• <b>Service Name</b>	Enter a name for the port forwarding rule.
• <b>Protocol</b>	Select a protocol for the application: Choices are Both, TCP and UDP.
• <b>Starting Port (1~65535)</b>	Enter a starting port number.
• <b>Ending Port (1~65535)</b>	Enter an ending port number. All ports numbers between the starting and ending ports will forward users to the IP address specified in the IP Address field.
• <b>IP Address</b>	Enter the IP address of the server computer on the LAN network where users will be redirected.
• <b>Save</b>	Click <b>Save</b> to save the new forwarding rule.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the setting.

### 5.4.5 DMZ Settings

The DMZ function allows the device to redirect all packets going to the WAN port IP address to a particular IP address on the LAN. The difference between the virtual server and the DMZ function is that a virtual server redirects a particular service or Internet application, such as FTP, to a particular LAN client or server, whereas a DMZ redirects all packets, regardless of the service, going to the WAN IP address to a particular LAN client or server.

Go to the **“Operation Mode”** page to configure the device as **“Client Router”** and then go to **“Router → DMZ Settings”** to enable/configure DMZ in client router mode.

Figure 5-31 DMZ

The page includes the following settings:

Object	Description
• <b>DMZ Hosting</b>	Select Enable DMZ to activate DMZ functionality.
• <b>DMZ Address</b>	Enter an IP address of a device on the LAN.
• <b>Accept</b>	Click <b>Accept</b> to apply the setting.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the setting.

## 5.5 Wireless

This section provides wireless related settings in different operation modes.

### 5.5.1 Wireless Network

Click "**Wireless → Wireless Network**" to configure the wireless basic settings. The wireless settings on this page may vary according to the selected operation mode.

Wireless Network		Home	Reset		
Wireless Mode	802.11 B/G/N Mixed ▼				
Channel HT Mode	20/40MHz ▼				
Extension Channel	Lower Channel ▼				
Channel / Frequency	Ch5-2.432GHz ▼	<input checked="" type="checkbox"/> Auto			
AP Detection	Scan				
Current Profiles					
SSID	Security	Isolation	VID	Enable	Edit
PLANET1	None	<input type="checkbox"/>	1	<input checked="" type="checkbox"/>	Edit
PLANET2	None	<input type="checkbox"/>	2	<input type="checkbox"/>	Edit
PLANET3	None	<input type="checkbox"/>	3	<input type="checkbox"/>	Edit
PLANET4	None	<input type="checkbox"/>	4	<input type="checkbox"/>	Edit
Accept Cancel					

Figure 5-32 Wireless Network – AP/WDS AP Mode

In the AP/WDS AP mode, click the **Edit** button on the “Wireless Network” page to enter the “SSID Profile” page to configure the SSID profile for the wireless network.

SSID Profile	
<b>Wireless Setting</b>	
SSID	PLANET1 (1 to 32 characters)
VLAN ID	1 (1~4094)
Suppressed SSID	<input type="checkbox"/>
Station Separation ⓘ	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
<b>Wireless Security</b>	
Security Mode	Disabled ▼
Save Cancel	

Figure 5-33 Wireless Network – SSID Profile

The page includes the following settings:

Object	Description
<ul style="list-style-type: none"> <li>• <b>Wireless Mode</b></li> </ul>	Wireless mode supports 802.11b/g/n mixed modes.
<ul style="list-style-type: none"> <li>• <b>Channel HT Mode</b></li> </ul>	The default channel bandwidth is 20/40MHz. The larger the channel, the better the transmission quality and speed.
<ul style="list-style-type: none"> <li>• <b>Extension Channel</b></li> </ul>	Select upper or lower channel. Your selection may affect the Auto channel function.
<ul style="list-style-type: none"> <li>• <b>Channel / Frequency</b></li> </ul>	Select the channel and frequency appropriate you're your country's regulation.
<ul style="list-style-type: none"> <li>• <b>Auto</b></li> </ul>	Check this option to enable auto-channel selection.
<ul style="list-style-type: none"> <li>• <b>AP Detection</b></li> </ul>	AP Detection can select the best channel to use by scanning nearby areas for Access Points.
<ul style="list-style-type: none"> <li>• <b>Current Profile</b></li> </ul>	Configure up to four different SSIDs. If many client devices will be accessing the network, you can arrange the devices into SSID groups. Click Edit to configure the profile and check whether you want to enable extra SSIDs.
<b>SSID Profile</b>	
<ul style="list-style-type: none"> <li>• <b>SSID</b></li> </ul>	Specify the SSID for the current profile.
<ul style="list-style-type: none"> <li>• <b>VLAN ID</b></li> </ul>	Specify the VLAN tag for the current profile.
<ul style="list-style-type: none"> <li>• <b>Suppressed SSID</b></li> </ul>	Check this option to hide the SSID from clients. If checked, the SSID will not appear in the site survey.
<ul style="list-style-type: none"> <li>• <b>Station Separation</b></li> </ul>	Click the appropriate radio button to allow or prevent communication between client devices.
<ul style="list-style-type: none"> <li>• <b>Wireless Security</b></li> </ul>	Refer to section <a href="#">5.5.3 Security Setting</a> .
<ul style="list-style-type: none"> <li>• <b>Save</b></li> </ul>	Click <b>Save</b> to save changes.
<ul style="list-style-type: none"> <li>• <b>Cancel</b></li> </ul>	Click <b>Cancel</b> to cancel the unsaved changes and revert to the previous settings.

In the CB/WDS STA/CR/Repeater mode, select **Security Mode** on the “**Wireless Network**” page to configure the wireless security to be the same as the root AP's security settings.

Wireless Network		Home	Reset
Wireless Mode	802.11 B/G/N Mixed ▼		
SSID	Specify the static SSID : <input type="text" value="AP SSID"/> (1 to 32 characters) Or press the button to search for any available WLAN Service. <input type="button" value="Site Survey"/>		
Preferred BSSID	<input type="checkbox"/> <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/>		
<b>Wireless Security</b>			
Changing the wireless security settings may cause this wireless client to associate with a different one. This may temporarily disrupt your configuration session.			
Security Mode	Disabled ▼		
<input type="button" value="Accept"/> <input type="button" value="Cancel"/>			

Figure 5-34 Wireless Network – CB/WDS STA/CR/Repeater Mode

The page includes the following settings:

Object	Description
• <b>Wireless Mode</b>	Wireless mode supports 802.11b/g/n mixed modes.
• <b>SSID</b>	Specify the SSID if known. This field is completed automatically if you select an Access Point in the Site Survey.
• <b>Site Survey</b>	Scans nearby locations for Access Points. You can select a discovered Access Point to establish a connection.
• <b>Prefer BSSID</b>	Enter the MAC address if known. If you select an Access Point in the Site Survey, this field is completed automatically.
• <b>Wireless Security</b>	Refer to section <a href="#">5.5.3 Security Setting</a> .
• <b>Accept</b>	Click <b>Accept</b> to apply the setting.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the unsaved changes and revert to the previous settings.

## 5.5.2 WDS Link Settings

Go to the “**Operation Mode**” page to configure the device as “**WDS Bridge**” and then go to “**Wireless → WDS Link Settings**” to configure the WDS link settings including PtP (Point to Point) or PtMP (Point to Multiple Points) applications.

## WDS Link Settings Home Reset

<b>Security</b>	AES ▼				
<b>WEP Key</b>	<input type="text"/>				40/64-bit(10 hex digits) ▼
<b>AES Passphrase</b>	<input type="text" value="12345678"/>				
	(8-63 ASCII characters or 64 hexadecimal digits)				

**CAUTION:** WDS was enabled, you need to assign Wifi Channel manually later.

ID	MAC Address	Mode
1	<input type="text" value="A8"/> : <input type="text" value="F7"/> : <input type="text" value="E0"/> : <input type="text" value="58"/> : <input type="text" value="1A"/> : <input type="text" value="94"/>	Enable ▼
2	<input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/>	Disable ▼
3	<input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/>	Disable ▼
4	<input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/>	Disable ▼

Figure 5-35 WDS Link Settings – WDS Bridge Mode

The page includes the following settings:

Object	Description
• <b>Security</b>	Select the type of WDS security: None, WEP, or AES.
• <b>WEP Key</b>	Enter the WEP key if select security as WEP.
• <b>AES Passphrase</b>	Enter the AES passphrase if select security as AES
• <b>MAC Address</b>	Enter the wireless MAC address of the AP to which you want to extend wireless connectivity.
• <b>Mode</b>	Select Disable or Enable to disable or enable WDS.
• <b>Accept</b>	Click <b>Accept</b> to save the settings.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the unsaved changes and revert to the previous settings.

**NOTE:**

1. The WDS link setting is only available in WDS Bridge mode and is communicating through wireless MAC address to each other by using non-standard protocol which may not be compatible with other brands/models of device. Using the same model for full compatibility is required.
2. The security setting in each site of WDS link must be the same.
3. The wireless channel must be fixed and must be the same in each site of WDS link.

### 5.5.3 Security Settings

Go to the “**Wireless → Wireless Network**” page to configure the security settings.

In the AP/WDS AP mode, click the **Edit** button on the “**Wireless Network**” page to enter the “**SSID Profile**” page and configure the wireless security for the wireless network.

SSID Profile	
<b>Wireless Setting</b>	
SSID	PLANET1 (1 to 32 characters)
VLAN ID	1 (1~4094)
Suppressed SSID	<input type="checkbox"/>
Station Separation	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
<b>Wireless Security</b>	
Security Mode	Disabled ▼
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

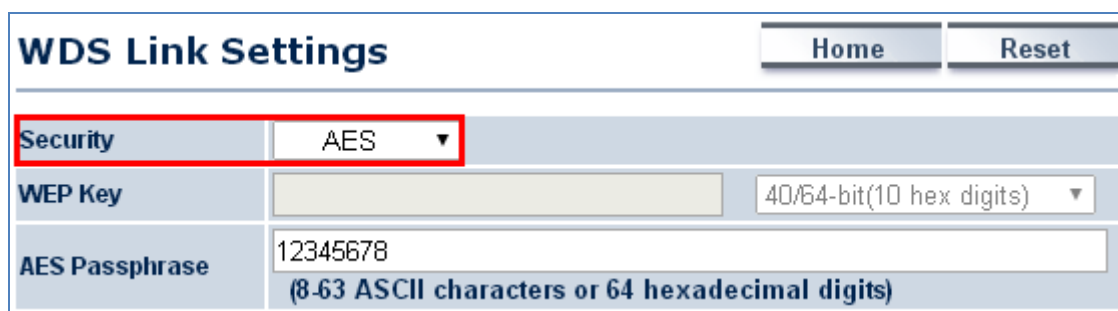

Figure 5-36 Security Settings – AP/WDS AP Mode

In the CB/WDS STA/CR/Repeater mode, select **Security Mode** on the “**Wireless Network**” page to configure the wireless security to be the same as the root AP’s security settings.

Wireless Network		Home	Reset
Wireless Mode	802.11 B/G/N Mixed ▼		
SSID	Specify the static SSID : <input type="text" value="AP SSID"/> (1 to 32 characters) Or press the button to search for any available WLAN Service. <input type="button" value="Site Survey"/>

<b>Wireless Security</b>			
Changing the wireless security settings may cause this wireless client to associate with a different one. This may temporarily disrupt your configuration session.			
Security Mode	Disabled ▼		
<input type="button" value="Accept"/> <input type="button" value="Cancel"/>			

Figure 5-37 Security Settings – CB/WDS STA/CR/Repeater Mode

In the WDS Bridge mode, select **Security Mode** on the “**WDS Link Settings**” page to configure the wireless security settings. The security settings in each site of the WDS link must be configured to the same.

WDS Link Settings		Home	Reset
Security	AES		
WEP Key		40/64-bit(10 hex digits)	
AES Passphrase	12345678 (8-63 ASCII characters or 64 hexadecimal digits)		

**Figure 5-38** Security Settings – WDS Bridge Mode

The option includes the following settings:

Object	Description
<ul style="list-style-type: none"> <li>Security Mode</li> </ul>	Select the suitable security mode from the drop-down list to encrypt the wireless network. The options include <b>Disabled</b> , <b>WEP</b> , <b>WPA-PSK</b> , <b>WPA2-PSK</b> , <b>WPA-PSK Mixed</b> , <b>WPA</b> , <b>WPA2</b> , and <b>WPA Mixed</b> . The latest WPA2-PSK mode is strongly recommended to use.

- The WEP and WPA/WPA2 with TKIP didn't support in pure 802.11n mode and these options will not available in pure 802.11n mode.
- In 802.11b/g/n mixed mode, if configured the security to WEP, WPA/WPA2 with TKIP, the connection mode/speed will be changed from 802.11n to 802.11g.

#### ■ Disabled

Authentication is disabled and no password/key is required to connect to the access point.

#### ■ WEP

WEP (Wired Equivalent Privacy) is a basic encryption. For a higher level of security, consider using the WPA encryption.

Wireless Security	
Security Mode	WEP ▼
Auth Type	Open System ▼
Input Type	Hex ▼
Key Length	40/64-bit (10 hex digits or 5 ASCII char) ▼ 40/64-bit (10 hex digits or 5 ASCII char) 104/128-bit (26 hex digits or 13 ASCII char) 128/152-bit (32 hex digits or 16 ASCII char)
Default Key	
Key1	
Key2	
Key3	
Key4	
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

Figure 5-39 Security Settings – WEP

The security mode includes the following settings:

Object	Description
• Security Mode	Select WEP from the drop-down list to configure the wireless network using WEP encryption method.
• Auth Type	Select Open System or Shared.
• Input Type	Select an input type of Hex or ASCII.
• Key Length	Level of WEP encryption is applied to all WEP keys. Select a 64-/128-/152-bit password length. <ul style="list-style-type: none"> <li>■ <b>40/64-bit:</b> enter 10 hexadecimal digits (any combination of 0-9, a-f, A-F and null key is not permitted) or 5 ASCII characters.</li> <li>■ <b>104/128-bit:</b> enter 26 hexadecimal digits (any combination of 0-9, a-f, A-F and null key is not permitted) or 13 ASCII characters.</li> <li>■ <b>128/152-bit:</b> enter 32 hexadecimal digits (any combination of 0-9, a-f, A-F and null key is not permitted) or 16 ASCII characters.</li> </ul>
• Default Key	Select 1 – 4 to specify which of the four WEP keys the device uses as its default.
• Key1 – Key4	Specify a password for the security key index. For security, each typed character is masked by a dot.
• Save	Click <b>Save</b> to save the settings.
• Cancel	Click <b>Cancel</b> to cancel the unsaved changes and revert to the previous settings.

## ■ WPA-PSK

Wireless Security	
Security Mode	WPA-PSK
Encryption	Both(TKIP+AES)
Passphrase	12345678 (8 to 63 characters) or (64 Hexadecimal characters)
Group Key Update Interval	3600 seconds(30~3600, 0: disabled)
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

Figure 5-40 Security Settings – WPA-PSK

The security mode includes the following settings:

Object	Description
• <b>Security Mode</b>	Select WPA-PSK from the drop-down list to configure the wireless network using WPA-PSK encryption method.
• <b>Encryption</b>	Select Both, TKIP, or AES as the encryption type. <ul style="list-style-type: none"> <li>■ <b>Both:</b> uses TKIP and AES.</li> <li>■ <b>TKIP:</b> automatic encryption with WPA-PSK; requires passphrase.</li> <li>■ <b>AES:</b> automatic encryption with WPA2-PSK; requires passphrase.</li> </ul>
• <b>Passphrase</b>	Specify the security password. For security, each typed character is masked by a dot.
• <b>Group Key Update Interval</b>	Specify how often, in seconds, the group key changes.
• <b>Save</b>	Click <b>Save</b> to save the settings.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the unsaved changes and revert to the previous settings.

## ■ WPA2-PSK

The later WPA2 protocol features compliance with the full IEEE 802.11i standard and uses Advanced Encryption Standard (AES) in addition to TKIP encryption protocol to guarantee better security than that provided by WEP or WPA.

Wireless Security	
Security Mode	WPA2-PSK ▾
Encryption	Both(TKIP+AES) ▾
Passphrase	12345678 (8 to 63 characters) or (64 Hexadecimal characters)
Group Key Update Interval	3600 seconds(30~3600, 0: disabled)
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

Figure 5-41 Security Settings – WPA2-PSK

The security mode includes the following settings:

Object	Description
• Security Mode	Select WPA2-PSK from the drop-down list to configure the wireless network using WPA2-PSK encryption method.
• Encryption	Select Both, TKIP, or AES as the encryption type. <ul style="list-style-type: none"> <li>■ <b>Both:</b> uses TKIP and AES.</li> <li>■ <b>TKIP:</b> automatic encryption with WPA-PSK; requires passphrase.</li> <li>■ <b>AES:</b> automatic encryption with WPA2-PSK; requires passphrase.</li> </ul>
• Passphrase	Specify the security password. For security, each typed character is masked by a dot.
• Group Key Update Interval	Specify how often, in seconds, the group key changes.

## 5.5.4 Wireless MAC Filter

Wireless MAC Filters are used to allow or deny network access to wireless clients according to their MAC addresses. You can manually add a MAC address to restrict the permission to access the device or refer to [section 5.2.3](#) to kick the associated client from the wireless client list.

Click “**Wireless → Wireless MAC Filter**” to configure the wireless access control settings.

The screenshot shows the 'Wireless MAC Filter' configuration interface. At the top right, there are 'Home' and 'Reset' buttons. The 'ACL Mode' is set to 'Deny MAC in the List'. Below this, there is a form to add a new MAC address, consisting of six input fields separated by colons, followed by an 'Add' button. A table below lists the current MAC filter entries. The table has two columns: '#', which is the sequence number, and 'MAC Address', which is the MAC address. There is one entry with ID '1' and MAC address '00:30:4F:A8:FF:FF', and a 'Delete' button next to it. At the bottom of the page is an 'Accept' button.

Figure 5-46 Wireless MAC Filter

The page includes the following settings:

Object	Description
<ul style="list-style-type: none"> <li>• <b>ACL Mode</b></li> </ul>	Determines whether network access is granted or denied to clients whose MAC addresses appear in the MAC Address table on this page. The option includes Disable, Deny MAC in the list, or Allow MAC in the list.
<ul style="list-style-type: none"> <li>• <b>Add</b></li> </ul>	Enter the wireless MAC address of the client in front of the <b>Add</b> button and then click <b>Add</b> to add the new entry to the MAC filtering list.
<ul style="list-style-type: none"> <li>• <b>#</b></li> </ul>	Displays the sequence number of the entries.
<ul style="list-style-type: none"> <li>• <b>MAC Address</b></li> </ul>	Displays the MAC Address that will be denied/allowed to access this device.
<ul style="list-style-type: none"> <li>• <b>Delete</b></li> </ul>	Click <b>Delete</b> to remove the entry from the list.
<ul style="list-style-type: none"> <li>• <b>Accept</b></li> </ul>	Click <b>Accept</b> to apply the setting.

### 5.5.5 Wireless Advanced Settings

Click “Wireless → Wireless Advanced Settings” to configure the wireless advanced settings.

This section allows you to configure the wireless related settings to optimize the wireless network.

Wireless Advanced Settings		Home	Reset
Data Rate	Auto ▼		
Transmit Power	Auto ▼		
RTS/CTS Threshold (1 - 2346)	2346	Bytes	
Distance (1-30km)	1	km (0.6 miles)	
Aggregation:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable 32 Frames 50000 Bytes(Max)		
<b>Wireless Traffic Shaping</b>			
Enable Traffic Shaping	<input type="radio"/> Enable <input checked="" type="radio"/> Disable		
Upload Limit	1000	kbit/s (512-99999999)	
Download Limit	180000	kbit/s (512-99999999)	
<b>Client Limit</b>			
	Frequency	Enable	Max Client
	2.4G	<input checked="" type="checkbox"/>	64
<input type="button" value="Accept"/> <input type="button" value="Cancel"/>			

Figure 5-47 Wireless Advanced Settings

The page includes the following settings:

Object	Description
<ul style="list-style-type: none"> <li>Data Rate</li> </ul>	Select a data rate from the drop-down list. The data rate affects throughput. If you select a low data rate value, for example, the throughput is reduced but the transmission distance increases. The default is “Auto”.
<ul style="list-style-type: none"> <li>Transmit Power</li> </ul>	<p>Configure the output transmission power of the device (Range: 11~29dBm). The PtP range less 1km should keep it as default and distance exceed 5km is suggested to highest value.</p> <p>The option is only allowed to be configured after disabled <b>Green</b> option of “Operation Mode” page. Keep it as default “Auto” setting to prevent violating regional regulation unless your configuration meets the</p>

	regulation.
<ul style="list-style-type: none"> <li>• <b>RTS/CTS Threshold</b></li> </ul>	When the length of a data packet exceeds this value, the device will send an RTS frame to the destination wireless node, and the latter will reply with a CTS frame, and thus they are ready to communicate. The default value is 2346. A small number causes RTS/CTS packets to be sent more often and consumes more bandwidth.
<ul style="list-style-type: none"> <li>• <b>Distance</b></li> </ul>	Specify the distance between the master AP and slave AP. Longer distances may drop high-speed connections.
<ul style="list-style-type: none"> <li>• <b>Aggregation</b></li> </ul>	A part of the 802.11n standard that allows sending multiple frames per single access to the medium by combining frames together into one larger frame. It creates the larger frame by combining smaller frames with the same physical source, destination end points, and traffic class (QoS) into one large frame with a common MAC header. This option reduces the number of packets, but increases packet sizes.
<b>Wireless Traffic Shaping</b>	
<ul style="list-style-type: none"> <li>• <b>Enable Traffic Shaping</b></li> </ul>	Enable or disable the regulation of packet flow leaving an interface for improved QoS.
<ul style="list-style-type: none"> <li>• <b>Incoming Traffic Limit</b></li> </ul>	Specify the wireless transmission speed used for downloading.
<ul style="list-style-type: none"> <li>• <b>Outgoing Traffic Limit</b></li> </ul>	Specify the wireless transmission speed used for uploading.
<ul style="list-style-type: none"> <li>• <b>Total Percentage</b></li> </ul>	Specify the total percentage of the wireless traffic that is shaped.
<ul style="list-style-type: none"> <li>• <b>SSID1 to SSID4</b></li> </ul>	Specify the percentage of the wireless traffic that is shaped for a specific SSID.
<b>Client Limit: This option is only available in AP and WDS AP modes.</b>	
<ul style="list-style-type: none"> <li>• <b>Frequency</b></li> </ul>	Display the frequency of the device's radio interface.
<ul style="list-style-type: none"> <li>• <b>Enable</b></li> </ul>	Click to enable the client limit function.
<ul style="list-style-type: none"> <li>• <b>Max Client</b></li> </ul>	Specify the max. client quantity that is allowed to connect to the radio interface.
<ul style="list-style-type: none"> <li>• <b>Accept</b></li> </ul>	Click <b>Accept</b> to apply all changes.
<ul style="list-style-type: none"> <li>• <b>Cancel</b></li> </ul>	Click <b>Cancel</b> to cancel the settings.

## 5.6 Management

On this page, you can configure the system settings for management purposes, including Management VLAN settings, Time settings, Password settings, SNMP settings, CLI settings, Wi-Fi schedule, Firmware upgrade, Configuration backup and restore, Factory default, and Auto reboot.

### 5.6.1 Administration (Password Settings)

Click "**Management → Administration**" to configure username and password of the login account.

Figure 5-48 Administration (Password Settings)

The page includes the following settings:

Object	Description
• <b>New Name</b>	Enter a new username for logging in to the Web page.
• <b>New Password</b>	Enter a new password for logging in to the Web page.
• <b>Confirm Password</b>	Re-enter the new password for confirmation.
• <b>Save/Apply</b>	Click <b>Save/Apply</b> to apply all changes.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the settings.

### 5.6.2 Management VLAN

Click “**Management → Management VLAN**” to configure the management VLAN settings.

Figure 5-49 Management VLAN

The page includes the following settings:

Object	Description
• <b>Management VLAN ID</b>	If your network includes VLANs and if tagged packets need to pass through the Access Point, enter the VLAN ID. Otherwise, select <b>No VLAN tag</b> .

• <b>Accept</b>	Click <b>Accept</b> to apply the changes.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the settings.

### 5.6.3 SNMP Settings

SNMP is used in network management systems to monitor network-attached devices for conditions that warrant administrative attention.

Click "**Management → SNMP Settings**" to configure SNMP settings.

SNMP Settings		Home	Reset
SNMP	<input checked="" type="radio"/> Enable <input type="radio"/> Disable		
Contact	<input type="text"/>		
Location	<input type="text"/>		
Community Name (Read Only)	public		
Community Name (Read Write)	private		
Trap Destination Address	<input type="text"/>		
Trap Destination Community Name	public		
SNMPv3	<input checked="" type="radio"/> v3Enable <input type="radio"/> v3Disable		
User Name (1-31 Characters)	admin		
Auth Protocol	MD5 ▼		
Auth Key (8-32 Characters)	12345678		
Priv Protocol	DES ▼		
Priv Key (8-32 Characters)	12345678		
Engine ID	<input type="text"/>		
<input type="button" value="Save/Apply"/> <input type="button" value="Cancel"/>			

**Figure 5-50** SNMP Settings

The page includes the following settings:

Object	Description
• <b>SNMP</b>	Enable or disable the SNMP service.
• <b>Contact</b>	Enter the contact details of the device.
• <b>Location</b>	Enter the location of the device.
• <b>Community Name (Read Only)</b>	Enter the password for accessing the SNMP community for read-only access.

• <b>Community Name (Read/Write)</b>	Enter the password for accessing the SNMP community for read and write access.
• <b>Trap Destination Address</b>	Enter the IP address where SNMP traps are to be sent.
• <b>Trap Destination Community Name</b>	Enter the password of the SNMP trap community.
• <b>SNMPv3</b>	Enable or Disable the SNMPv3 feature.
• <b>User Name</b>	Specify the username for SNMPv3.
• <b>Auth Protocol</b>	Select the authentication protocol type: MD5 or SHA.
• <b>Auth Key (8-32 Characters)</b>	Specify the authentication key for authentication.
• <b>Priv Protocol</b>	Select the privacy protocol type: DES.
• <b>Priv Key (8-32 Characters)</b>	Specify the privacy key for privacy.
• <b>Engine ID</b>	Specify the engine ID for SNMPv3.
• <b>Save/Apply</b>	Click <b>Save/Apply</b> to apply all changes.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the settings.

#### 5.6.4 Backup/Restore Settings

Click “**Management → Backup/Restore Settings**” and the following page will be displayed.

**Figure 5-51** Backup/Restore Settings

The page includes the following settings:

Object	Description
• <b>Save A Copy of Current Settings</b>	Click <b>Backup</b> to save the current configured settings.
• <b>Restore Saved Settings from A File</b>	To restore settings that have been previously backed up, click <b>Choose File</b> to select the file, and click <b>Restore</b> .
• <b>Revert to Factory Default Settings</b>	Click <b>Factory Default</b> to restore the device to its factory default settings.

### 5.6.5 Auto Reboot Settings

Click “**Management → Auto Reboot Settings**” and the following page will be displayed.

This page allows you to enable and configure system auto reboot interval. The device can regularly reboot according to the frequency in different time formats of interval.

**Figure 5-52** Auto Reboot Settings

The page includes the following settings:

Object	Description
<ul style="list-style-type: none"> <li>• <b>Auto Reboot Settings</b></li> </ul>	Select Enable from the drop-down menu to setup this function.
<ul style="list-style-type: none"> <li>• <b>Frequency of Auto Reboot</b></li> </ul>	Select the frequency interval using the drop-down menus. The interval supported in different time formats: <ul style="list-style-type: none"> <li>• Min: 10/20/30/40/50/60 Mins</li> <li>• Hour: 1~24 hours</li> <li>• Day: 1~31 days</li> <li>• Week: 1~5 weeks</li> </ul>
<ul style="list-style-type: none"> <li>• <b>Save/Apply</b></li> </ul>	Click <b>Save/Apply</b> to apply all changes.
<ul style="list-style-type: none"> <li>• <b>Cancel</b></li> </ul>	Click <b>Cancel</b> to cancel the settings.

### 5.6.6 Firmware Upgrade

Click “**Management → Firmware Upgrade**” to upgrade the device’s firmware.

**Figure 5-53** Firmware Upgrade

The page includes the following settings:

Object	Description
<ul style="list-style-type: none"> <li>• <b>Current Firmware Version</b></li> </ul>	Click <b>ON</b> to enable or click <b>OFF</b> to disable the option.
<ul style="list-style-type: none"> <li>• <b>Choose File</b></li> </ul>	Click <b>Choose File</b> to locate and select the upgrade file from your local hard disk.
<ul style="list-style-type: none"> <li>• <b>Upload</b></li> </ul>	Click <b>Upload</b> to upgrade the firmware.

---

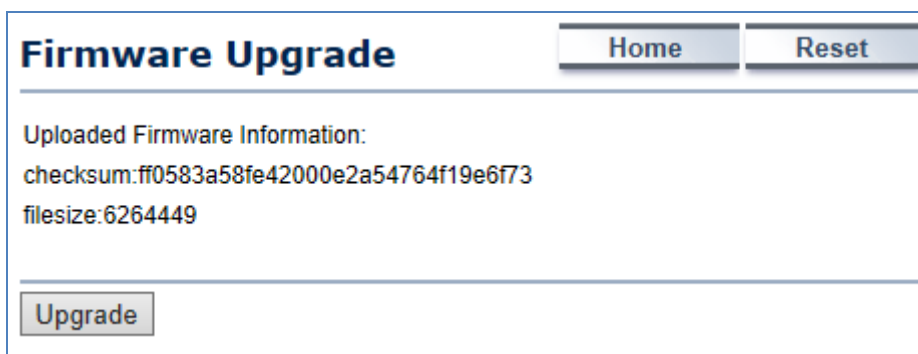

*Firmware Upgrade Procedure*

---

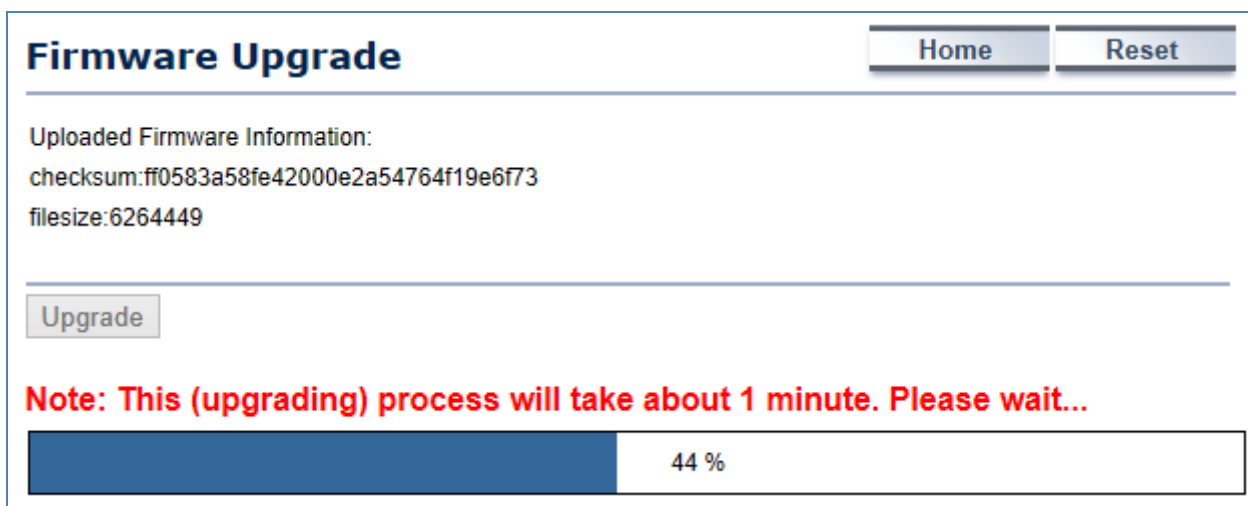

The following procedure will guide you to how to upgrade the firmware.

**Step 1.** Click the **Choose File** button to locate the firmware file path. Then, click the **Upload** button.

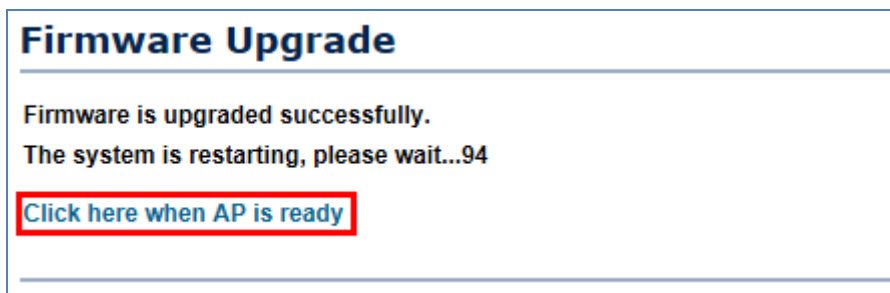

**Step 2.** The firmware checksum information appeared to help you confirm the file is correct. Once confirmed, click the **Upgrade** button to begin the upgrade process.

**Step 3.** Wait for the process to finish.

**Step 4.** When the upgrade is finished, the system will auto reboot and you can click the hyperlink “**Click here when AP is ready**” after the system restarts.

### 5.6.7 Time Settings

Click “**Management → Time Settings**” to configure time zone and NTP server settings to be in sync with the device’s time.

**Figure 5-54** Time Settings

The page includes the following settings:

Object	Description
<ul style="list-style-type: none"> <li>• <b>Manually Set Date and Time</b></li> </ul>	Enter the date and time values in the date and time fields or click the <b>Synchronize with PC</b> to get the date and time values from the administrator’s PC.
<ul style="list-style-type: none"> <li>• <b>Automatically Get Date and Time</b></li> </ul>	Select a time zone from the drop-down list and check whether you want to enter the IP address of an NTP server or use the default NTP server.
<ul style="list-style-type: none"> <li>• <b>Enable Daylight Saving</b></li> </ul>	Click to enable or disable daylight savings time. Select the start and stop times from the Start Time and Stop Time dropdown lists.
<ul style="list-style-type: none"> <li>• <b>Save/Apply</b></li> </ul>	Click <b>Save/Apply</b> to apply all changes.
<ul style="list-style-type: none"> <li>• <b>Cancel</b></li> </ul>	Click <b>Cancel</b> to cancel the settings.

## 5.6.8 Wi-Fi Schedule

This page allows you to configure wireless schedule. The device can regularly enable/disable Wi-Fi function according to the pre-defined schedule rules.

Click “**Management → Auto Reboot Settings**” and the following page will be displayed.

Figure 5-55 Wi-Fi Schedule

The page includes the following settings:

Object	Description
• <b>Schedule Name</b>	Enter the description of the schedule service.
• <b>Service</b>	Select the type of schedule service, either Wireless Power ON or Wireless Power OFF.
• <b>Day</b>	Select the days of the week to enable the schedule service.
• <b>Time of Day</b>	Set the start time that the service is active.
• <b>Add</b>	Click <b>Add</b> to append the schedule service to the schedule service table
• <b>Cancel</b>	Click <b>Cancel</b> to discard changes.

### 5.6.9 CLI Settings

The command line interface (CLI) allows user to access the device through a command console, modem or Telnet connection for configuration.

Click “**Management** → **CLI Settings**” to enable/disable CLI (Command Line Interface).

**Figure 5-56** CLI Settings

The page includes the following settings:

Object	Description
• CLI	Select ON/OFF to enable or disable the ability to modify the device via a command line interface (CLI).
• Save/Apply	Click <b>Save/Apply</b> to apply all changes.
• Cancel	Click <b>Cancel</b> to cancel the settings.

### 5.6.10 Log

Click “**Management** → **Log**” to enable/disable system log.

**Figure 5-57** Log

The page includes the following settings:

Object	Description
• <b>Syslog</b>	Enable or disable the syslog function.
• <b>Log Server IP Address</b>	Enter the IP address of the log server.
• <b>Local Log</b>	Enable or disable the local log service.
• <b>Save/Apply</b>	Click <b>Save/Apply</b> to apply all changes.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the settings.

### 5.6.11 Diagnostics

Click "**Management → Diagnostics**" to test the connection and performance through the built-in diagnostics utilities.

## Diagnostics

The page includes the following settings:

Object	Description
• <b>Target IP / Domain Name</b>	Enter the IP address you would like to search.
• <b>Ping Packet Size</b>	Enter the packet size of each ping.
• <b>Number of Pings</b>	Enter the number of times you want to ping.
• <b>Start Ping</b>	Click <b>Start Ping</b> to begin pinging.
• <b>Trace route target</b>	Enter an IP address or domain name you want to trace.
• <b>Start Traceroute</b>	Click <b>Start Traceroute</b> to begin the traceroute operation.
• <b>Target Address</b>	Enter the IP address of the target PC.
• <b>Time period</b>	Enter time period for the speed test.
• <b>Check Interval</b>	Enter the interval for the speed test.
• <b>Start Speed Test</b>	Click <b>Start Speed Test</b> to begin the speed test operation.
• <b>IPv4 Port</b>	Displays the IPv4 port number of the device.
• <b>IPv6 Port</b>	Displays the IPv6 port number of the device.

### 5.6.12 Logout

Click "**Management** → **Logout**" to log out the system.

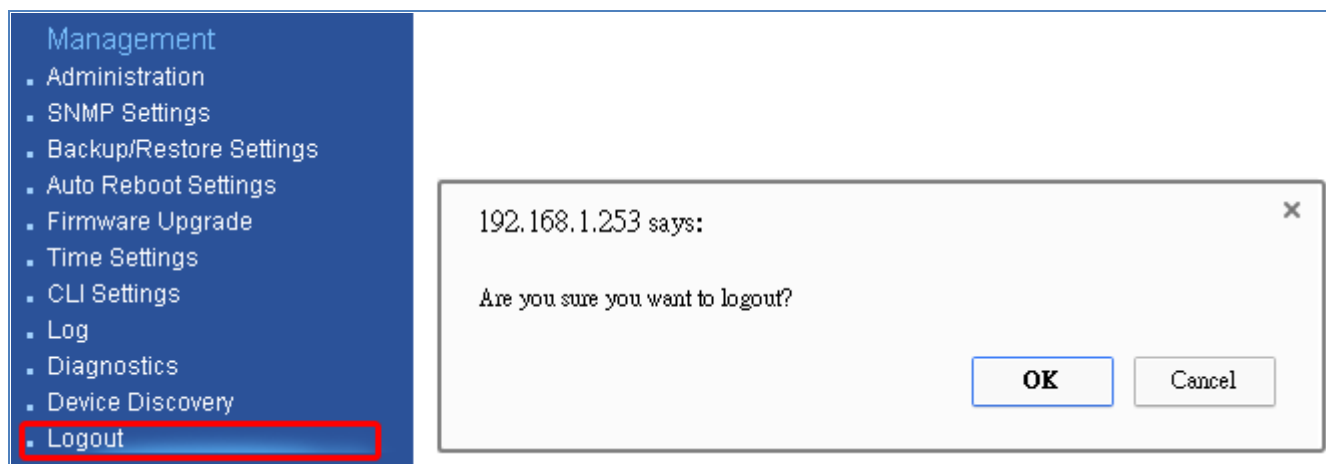

Figure 5-59 Logout

The page includes the following settings:

Object	Description
• <b>OK</b>	Click <b>OK</b> to log out the system.
• <b>Cancel</b>	Click <b>Cancel</b> to cancel the operation.

## Appendix A: Troubleshooting

If you find the AP is working improperly or stop responding to you, please read this troubleshooting first before contacting the Planet Tech Support for help. Some problems can be solved by yourself within very short time.

Scenario	Solution
The AP is not responding to me when I want to access it by web browser.	<ol style="list-style-type: none"> <li>Please check the connection of the power cord and the Ethernet cable of this AP. All cords and cables should be correctly and firmly inserted to the AP.</li> <li>If all LEDs on this AP are off, please check the status of power adapter, and make sure it is correctly powered.</li> <li>You must use the same IP address section that AP uses.</li> <li>Are you using MAC or IP address filter? Try to connect the AP by another computer and see if it works; if not, please reset the AP to the factory default settings (Press the 'reset' button for over 10 seconds).</li> <li>Set your computer to static IP address, and see if the Planet Smart Discovery can find the AP or not.</li> <li>If you did a firmware upgrade and this happens, contact the Planet Tech Support for help.</li> <li>If all the solutions above don't work, contact Planet Tech Support for help.</li> </ol>
I can't get connected to the Internet.	<ol style="list-style-type: none"> <li>Check the Internet connection status from the router that is connected with the AP.</li> <li>Please be patient. Sometimes Internet is just that slow.</li> <li>If you have connected a computer to Internet directly before, try to do that again, and check if you can get connected to Internet with your computer directly attached to the device provided by your Internet service provider.</li> <li>Check PPPoE / L2TP / PPTP user ID and password in your router again.</li> <li>Call your Internet service provider and check if there's something wrong with their service.</li> <li>If you just can't connect to one or more website, but you can still use other internet services, please check URL/Keyword filter.</li> <li>Try to reset the AP and try again later.</li> <li>Reset the device provided by your Internet service provider.</li> <li>Try to use IP address instead of hostname. If you can use IP address to communicate with a remote server, but can't use hostname, please check DNS setting.</li> </ol>
I can't locate my AP by my wireless device.	<ol style="list-style-type: none"> <li>'Broadcast ESSID' set to off?</li> <li>The antenna is properly secured.</li> </ol>

	<ul style="list-style-type: none"> <li>c. Are you too far from your AP? Try to get closer.</li> <li>d. Please remember that you have to input ESSID on your wireless client manually, if ESSID broadcast is disabled.</li> </ul>
<p>File downloading is very slow or breaks frequently.</p>	<ul style="list-style-type: none"> <li>a. Are you using QoS function? Try to disable it and try again.</li> <li>b. Internet is slow sometimes; try to be patient.</li> <li>c. Try to reset the AP and see if it's better after that.</li> <li>d. Try to know what computers do on your local network. If someone's transferring big files, other people will think Internet is really slow.</li> <li>e. If this never happens before, call you Internet service provider to know if there is something wrong with their network.</li> </ul>
<p>I can't log in to the web management interface; the password is wrong.</p>	<ul style="list-style-type: none"> <li>a. Make sure you're connecting to the correct IP address of the AP.</li> <li>b. Password is case-sensitive. Make sure the 'Caps Lock' light is not illuminated.</li> <li>c. If you really forget the password, do a hard reset.</li> </ul>
<p>The AP becomes hot</p>	<ul style="list-style-type: none"> <li>a. This is not a malfunction, if you can keep your hand on the AP's case.</li> <li>b. If you smell something wrong or see the smoke coming out from AP or A/C power adapter, please disconnect the AP and A/C power adapter from utility power (make sure it's safe before doing this!), and call your dealer for help.</li> </ul>

## Appendix B: Use Planet Smart Discovery to find AP

To easily discover the WAP-200N/WBS-200N in your Ethernet environment, the Planet Smart Discovery Utility is an ideal solution. The utility is available at: [http://www.planet.com.tw/en/product/images/48590/Planet\\_Utility.zip](http://www.planet.com.tw/en/product/images/48590/Planet_Utility.zip)

The following instructions will guide you to how to use the Planet Smart Discovery Utility.

**Step 1.** Download the **Planet Smart Discovery Utility** in administrator PC.

**Step 2.** Execute this utility.

**Step 3.** Click the “**Refresh**” button as shown below to update the list of the currently connected devices.

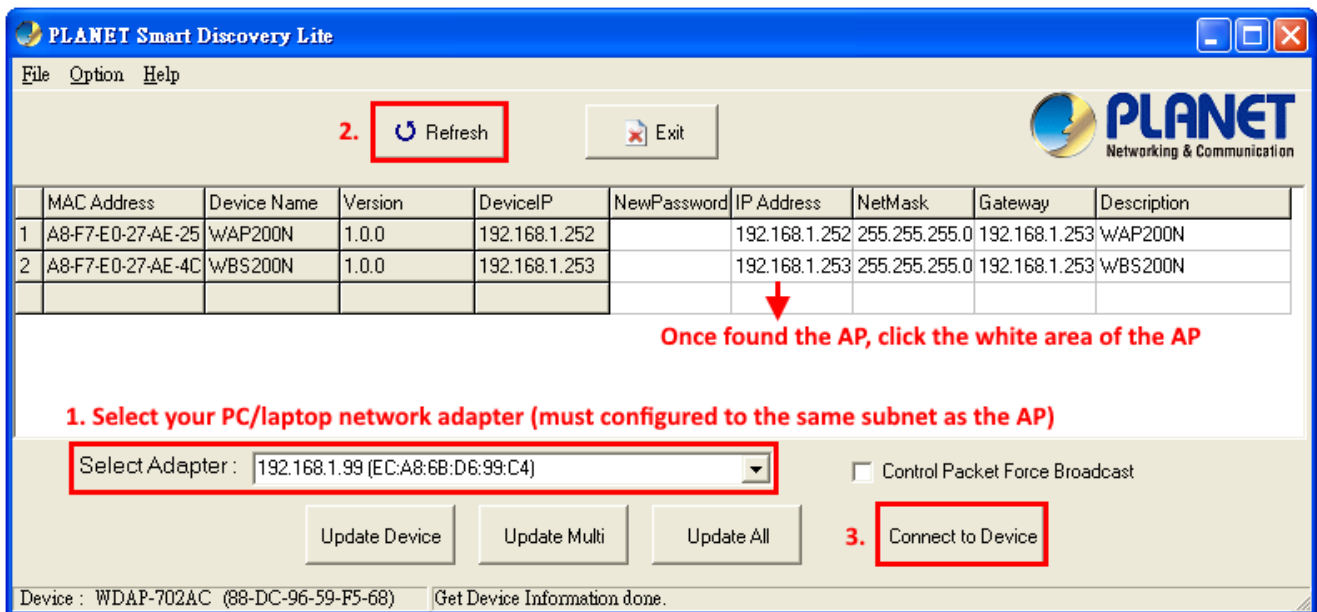

Figure B-1 PLANET Smart Discovery

**Step 4.** Select the AP from the list and then click the “**Connect to Device**” button to link to the Web Management Configuration page.

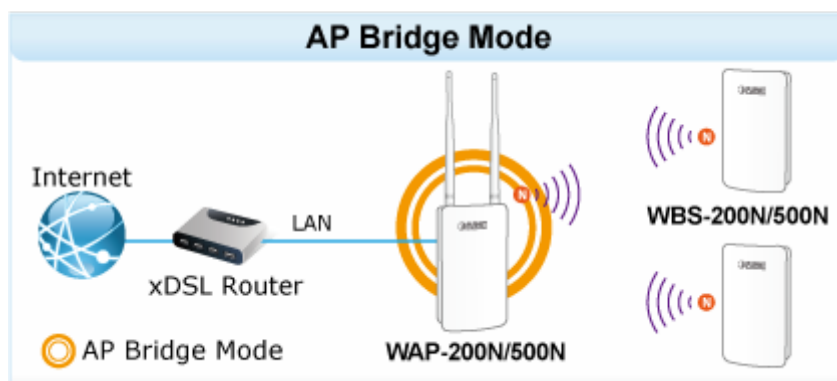

The fields in white background can be modified directly, and then you can apply the new setting by clicking the “**Update Device**” button.

## Appendix C: FAQ

### Q1: How to set up the AP Client Connection

#### Topology:

1. Use static IP in the PCs that are connected with AP-1 (Site-1) and AP-2 (Site-2). In this case, Site-1 is “192.168.1.100”, and Site-2 is “192.168.1.200”.

2. In the AP-1, go to “**System-> IP Settings**” to configure the IP address to static and different from the CPE.

IP Settings		Home	Reset
<b>System Information</b>			
IP Network Setting	<input type="radio"/> Obtain an IP address automatically (DHCP) <input checked="" type="radio"/> Specify an IP address		
IP Address	192	168	1 . 252

```

Attention should be paid to the following hints:

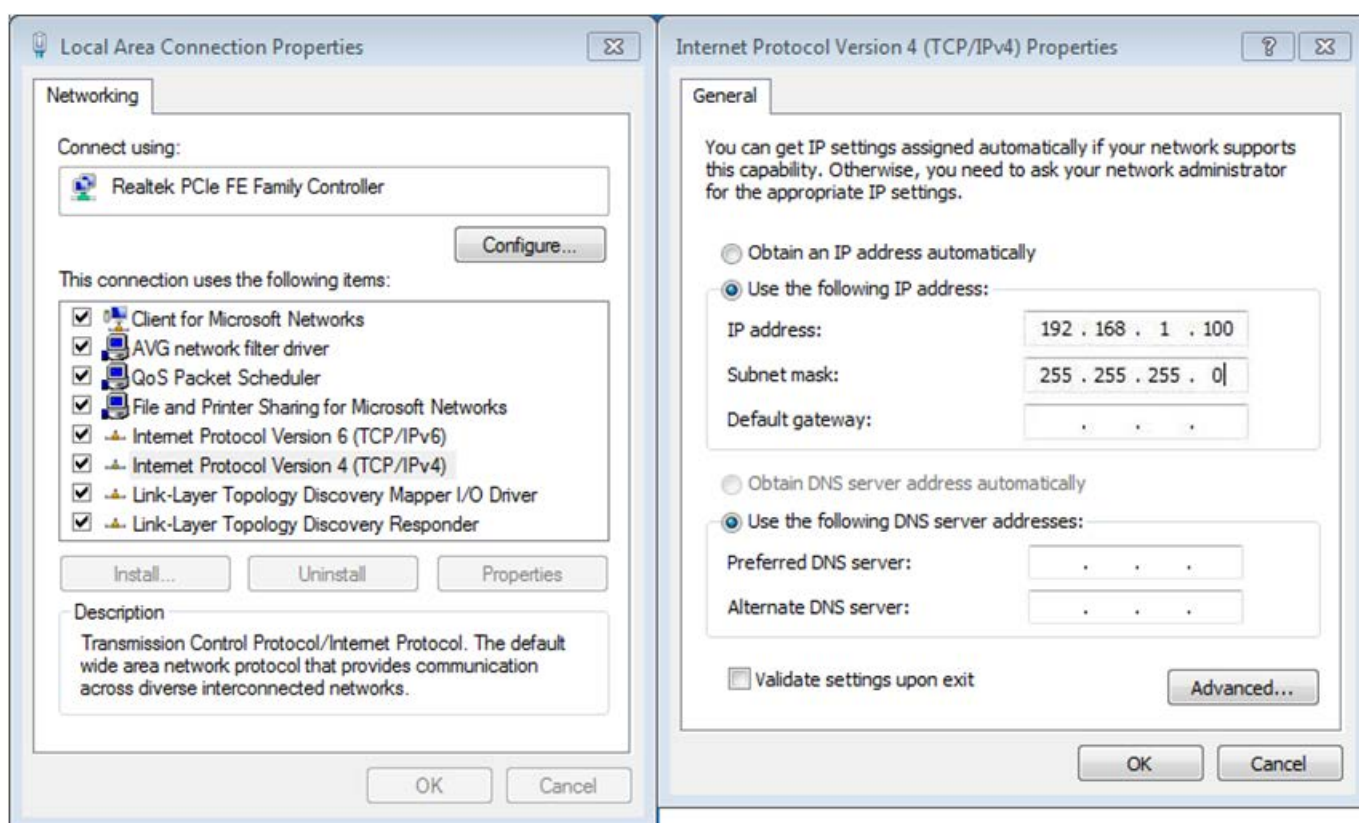

- 1) The encryption method must be the same at both sites if configured.
  - 2) Both sites should be Line-of-Sight.
  - 3) Included in the package are two 5dBi antennas for the WAP-200N only for long distance over 1km. Please connect to the 2.4GHz antennas with higher gain.
  - 4) For PtP connection over 1km, please adjust "**Distance**" setting to the actual distance between both sites on the 'both sites' setting page.
  - 5) To adjust "**Transmit Power**", please:
    - (a) Go to the "**Operation Mode**" page to disable the "**Green**" option.
    - (b) Go to "**Wireless Advanced Settings-> Transmit Power**" to manually adjust the transmit power.
-

## Q2: How to set up the WDS Connection

### Topology:

1. Use static IP in the PCs that are connected with WBS-200N-1 (Site-1) and WBS-200N-2 (Site-2). In this case, Site-1 is "192.168.1.100", and Site-2 is "192.168.1.200".

2. In the AP-1, go to "System-> IP Settings" to configure the IP address to static and different from the CPE.

IP Settings		Home	Reset
<b>System Information</b>			
IP Network Setting	<input type="radio"/> Obtain an IP address automatically (DHCP) <input checked="" type="radio"/> Specify an IP address		
IP Address	192	168	1 . 252

```

Attention should be paid to the following hints:

- 1) The encryption method must be the same at both sites if configured.
  - 2) Both sites should be Line-of-Sight.
  - 3) Included in the package are two 5dBi antennas for the WAP-200N only for long distance over 1km. Please connect to the 2.4GHz antennas with higher gain.
  - 4) For PtP connection over 1km, please adjust "**Distance**" setting to the actual distance between both sites on the 'both sites' setting page.
  - 5) To adjust "**Transmit Power**", please:
    - (a) Go to the "Operation Mode" page to disable the "Green" option.
    - (b) Go to the "Wireless Advanced Settings-> Transmit Power" to manually adjust the transmit power.
-

## EC Declaration of Conformity

English	Hereby, <b>PLANET Technology Corporation</b> , declares that this <b>300Mbps 802.11n Wireless Outdoor AP/CPE</b> is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.	Lietuviškai	Šiuo <b>PLANET Technology Corporation</b> ., skelbia, kad <b>300Mbps 802.11n Wireless Outdoor AP/CPE</b> tenkina visus svarbiausius 1999/5/EC direktyvos reikalavimus ir kitas svarbias nuostatas.
Česky	Společnost <b>PLANET Technology Corporation</b> , tímto prohlašuje, že tato <b>300Mbps 802.11n Wireless Outdoor AP/CPE</b> splňuje základní požadavky a další příslušná ustanovení směrnice 1999/5/EC.	Magyar	A gyártó <b>PLANET Technology Corporation</b> , kijelenti, hogy ez a <b>300Mbps 802.11n Wireless Outdoor AP/CPE</b> megfelel az 1999/5/EK irányelv alapkövetelményeinek és a kapcsolódó rendelkezéseknek.
Dansk	<b>PLANET Technology Corporation</b> , erklærer herved, at følgende udstyr <b>300Mbps 802.11n Wireless Outdoor AP/CPE</b> overholder de væsentlige krav og øvrige relevante krav i direktiv 1999/5/EF	Malti	Hawnhekk, <b>PLANET Technology Corporation</b> , jiddikjara li dan <b>300Mbps 802.11n Wireless Outdoor AP/CPE</b> jikkonforma mal-ħtiġijiet essenzjali u ma provvedimenti oħrajn relevanti li hemm fid-Dirrettiva 1999/5/EC
Deutsch	Hiermit erklärt <b>PLANET Technology Corporation</b> , dass sich dieses Gerät <b>300Mbps 802.11n Wireless Outdoor AP/CPE</b> in Übereinstimmung mit den grundlegenden Anforderungen und den anderen relevanten Vorschriften der Richtlinie 1999/5/EG befindet". (BMW)	Nederlands	Hierbij verklaart , <b>PLANET Technology Corporation</b> , dat <b>300Mbps 802.11n Wireless Outdoor AP/CPE</b> in overeenstemming is met de essentiële eisen en de andere relevante bepalingen van richtlijn 1999/5/EG
